The IEO could not have completed the evaluation without the support of the following:

STAKEHOLDERS AND PARTNERS

UNDP Mali staff: Aboubacar Koulibaly (Deputy Resident Representative, Country Director), Maleye Diop (Deputy Country Director, Programmes), Mariam Toure (Programme Associate), Cheikhna Mangassouba (Programme Management Support Unit Head), and Aminata Coulilibaly (Administrative Associate).

Other stakeholders and partners: Government of Mali, representatives of the United Nations agencies, civil society, and bilateral and multilateral development partners.
It is my pleasure to present the Independent Country Programme Evaluation for UNDP in Mali, the first country-level assessment conducted by the Independent Evaluation Office (IEO) of the United Nations Development Programme (UNDP) in the country. This evaluation covers the programme period 2015 to 2019.

Mali’s development continues to be affected by the aftermath of the 2012 political and security crisis, which had severe economic and social consequences for its population. Instability and conflict have particularly impacted the country’s social cohesion, food security and the livelihoods of its most vulnerable population. In 2013, a UN multidimensional peacekeeping mission – MINUSMA – was set up, and in 2015 a peace agreement was signed between the Government and rebel groups. In response to the crisis, Mali has started implementing decentralization and development programmes targeting the northern regions. President Ibrahim Boubacar Keita, first elected in 2013, was re-elected in August 2018, through elections that were recognized as credible and transparent by the international community and held with the joint support of UNDP and MINUSMA.

The evaluation found that UNDP’s work demonstrates a good balance between policy support at the central level and interventions at the local level that aim to benefit Mali’s most vulnerable people. While UNDP has established effective partnerships with government partners, leading to tangible results in policy development, the multiplication of policies and strategies have contributed to a scattering of UNDP’s efforts both thematically and geographically. UNDP’s work across the country, including in hard-to-reach areas, lacks solid monitoring systems that would support data collection from projects’ implementation, identify bottlenecks and risks, and effectively communicate on results. As UNDP in Mali moves forward under a new country programme document, the country office will have to clearly define its thematic and geographic areas of intervention. This will imply choosing a more limited number of regions where it can implement integrated interventions that respond to strong and immediate needs, address the complex development challenges of Mali more effectively, thereby demonstrating the added value of UNDP’s presence.

I would like to thank the Government of Mali, the various national stakeholders, colleagues at the UNDP Mali country office and the Regional Bureau for Africa for their support throughout the evaluation. I am sure that the findings, conclusions and recommendations will strengthen the formulation of the next country programme strategy.

</table>
Mali is a vast Landlocked Developing Country and Least Developed Country in north-western Africa. In 2012, the country went through a political and security crisis that has had severe economic and social consequences. In July 2013, an integrated stabilization mission (Mission multidimensionnelle intégrée des Nations Unies pour la stabilisation au Mali – MINUSMA) was set up by the United Nations Security Council, in agreement with and in support of the transition authorities of Mali. Although extreme poverty rates have dipped slightly since 2017, regional inequalities persist and the population – particularly in rural areas – still is vulnerable to security, economic and environmental shocks.

UNDP in Mali developed a country programme document for 2015-2019, established around objectives in line with the country’s Strategic Framework for Economic Recovery and Sustainable Development 2016-2018 (CREDD) and the 2015-2019 United Nations Development Assistance Framework outcomes. UNDP’s programme in Mali planned to contribute to the following four outcomes: 1) Strengthening security, peace and national reconciliation, 2) Inclusive growth and sustainable development, 3) The promotion of good governance, and 4) Access to quality basic social services.

Findings and conclusions

UNDP’s programme in Mali is thematically and geographically scattered, which raises concerns for effective implementation and monitoring of results. In addition, the multiplication of efforts...
across the programme thematic areas illustrates the lack of strategy guiding UNDP’s work in its development approach.

Weaknesses in programme monitoring and project data collection negatively affected UNDP’s capacity to address bottlenecks and implementation risks in time, as well as its capacity to communicate on what it has achieved. This has had negative consequences on UNDP’s ability to mobilize resources.

UNDP’s position in Mali is unclear to many, affecting its ability to collaborate with development partners.

Coordination and joint activities with UN and other development partners have improved but remain largely insufficient. UNDP must work with the UN Country Team and MINUSMA to develop a more coordinated and coherent development programme in Mali, making better use of agencies’ respective expertise to better address the country’s numerous development challenges.

**Recommendations**

**Recommendation 1.** UNDP must clearly define, both geographically and thematically, its area of intervention. An increased focus will help the country office in setting realistic goals, improve the monitoring of its activities, and better communicate on achieved results.

**Recommendation 2.** The next programme must be based on strategies that actively support exploring synergies and thematic integration to address the complex development challenges of Mali more effectively.

**Recommendation 3.** Strengthening the country office’s capacity for programme monitoring and evaluation will contribute to improved reporting, clear positioning, as well as addressing implementation risks and insufficient results while projects are being implemented.

**Recommendation 4.** UNDP should improve and clarify its position among the development partners of Mali. It has a recognized advantage as the main actor that can bring effective ways to deliver on the Sustainable Development Goals (SDGs). In turn, the SDGs should also be a means for UNDP to better focus its programme.

**Recommendation 5.** UNDP can use its central role, its good collaboration with government partners and the SDGs as entry points for a more coordinated UN development effort.
CHAPTER 1

BACKGROUND AND INTRODUCTION
1.1 Objectives of the evaluation

The Independent Evaluation Office (IEO) of the United Nations Development Programme (UNDP) conducted an Independent Country Programme Evaluation (ICPE) in Mali in 2018. The ICPE covered the period from 2015 to early 2018, namely the first three years of the current 2015-2019 cycle. Its objectives are as follows:

- Support the development of the new UNDP country programme;
- Strengthen the accountability of UNDP vis-à-vis national stakeholders;
- Strengthen the accountability of UNDP vis-à-vis the UNDP Executive Board.

This first ICPE in Mali aims to provide key elements for the development of a new country programme, which the country office and relevant national stakeholders will implement starting in 2020.

1.2 National context and development challenges

Mali, a vast landlocked country, is located in north-western Africa, bordering Algeria, Mauritania, Senegal, Guinea, Burkina Faso, and Niger. The country has a total area of 1,241,238 km², with significant variations in population density between its regions. The total population of Mali is 17.8 million.

Long considered a politically stable country, and a model for democracy in the region, Mali has been governed since 1991 by civilian governments elected through democratic, multiparty elections held every five years. However, in 2012, fighting erupted between Government forces and Tuareg rebels, leading to a political and security crisis that has resulted in dire economic and social consequences. In January 2013, French-led military forces were deployed. The Mission multidimensionnelle intégrée des Nations Unies pour la stabilisation au Mali (United Nations Multidimensional Integrated Stabilization Mission in Mali – MINUSMA) was set up by the Security Council in July 2013, in agreement with and in support of the transition authorities of Mali. Negotiations between the Government and rebel coalitions culminated in the signing of a peace agreement in 2015 (‘Accord d’Alger’), which highlighted the need for decentralization and regional development, particularly in the North.

In July and August 2013, presidential elections recognized as transparent and credible by the electoral observation missions of the European Union, the Economic Community of West African States and the African Union, were held with the joint support of UNDP and MINUSMA. The current Head of State is President Ibrahim Boubacar Keita, who holds a five-year mandate with a two-term limit imposed by the 1992 Constitution. The President appoints the Prime Minister, who, as the Head of Government, holds executive power and shares legislative power with the National Assembly.

After a decade of solid economic growth (5.7 percent on average for 2000-2010), the 2012 crisis had a severe impact on the country’s economy. Net GDP growth rates went from 0 percent in 2012, to 1.7 percent in 2013 and reached 7 percent in 2014. Between 2015 and 2017, average economic growth reached 5.5 percent. Mali’s agriculture, fishing and livestock sectors represented approximately 40 percent of GDP between 2012 and 2015 and accounted for just under half of that period’s economic growth. Due to its potential demographic and economic impact, the development of the primary sector is a major challenge for the country, as it is subject to climate change and price fluctuations for primary commodities. Agriculture employs around two-thirds of the workforce.

---

3 President Keita was re-elected in August 2018 for a second mandate.
4 African Economic Outlook (AEO), 2017.
in Mali, making inclusive growth in the country highly dependent on the sector’s prospects.\(^6\)

In 2016, Mali’s Human Development Index was 0.442, ranking it 175 out of 188 countries, which positions the country in the low human development category.\(^7\) Progress towards the Millennium Development Goals deteriorated due to the 2012 political and security crisis, with poverty rates increasing between 2012 and 2013. Overall progress on health indicators shows encouraging results, but the nutritional situation remains precarious, and access to quality health services must be further focused on in future governmental plans. The Strategic Framework for Growth and Poverty Reduction (CSCRP) had allocated 8 percent of its 2012-2014 budget to the health sector, but only 5 percent was spent.\(^8\) Education is a clear priority of Mali’s government action plan for 2013-2018, and a key sector in the CSCRP, representing a fifth of its budget, which shows the Government’s commitment to improving schooling in the country.

In late 2016, the Government adopted the Strategic Framework for Economic Recovery and Sustainable Development 2016-2018 (CREDD) to design, implement and monitor development policies and strategies. The new National Development Strategy integrates the Government’s strategic orientations with the ambitions of technical and financial partners in a single reference document reflecting the development priorities for the 2016-2018 period.\(^9\) It was adopted on 27 April 2016 and formally approved by Decree No. 2016-0889/P-RM of 23 November 2016 as a national policy document. Thus, the priorities of Mali’s Plan for Sustainable Recovery (PRED 2013-2014), the Government Action Programme (PAG 2013-2018), the Accelerated Development Programme of the Northern Regions (PDA/RN), New Challenges of the Agreement for Peace and Reconciliation in Mali are encapsulated in this new single reference document, making it possible to bring coherence into all these policies and strategies.

Gender equality, and in particular women’s participation in economic and political activities, remains an important challenge. In 2015, Mali’s Gender Inequality Index (GII) value was 0.689, ranking it 156\(^9\) out of 159 countries. In Mali, 8.8 percent of parliamentary seats are held by women, and 7.3 percent of adult women have reached at least a secondary level of education – compared to 16.2 percent of their male counterparts. Female participation in the labour market is 50.1 percent compared to 82.3 for men.\(^10\)

Mali’s key environmental challenges arise from desertification, natural disasters and decreasing rainfall due to climate change, which, coupled with weak environmental governance, have led to additional challenges of increasing pollution and degradation of natural resources, biodiversity and of living conditions. Due to the large share of a rural, small-farm-holding population, impacts of environmental challenges negatively affect livelihoods and food security. Mali was hit by a drought in 2011, resulting in poor harvests, and floods in 2012, further compounding the regional inequalities preceding the 2012 conflict and political crisis.\(^11\) Rapid demographic growth and urbanization put additional pressure on natural resources, and access to water is also a key concern. In 2014, the country adopted a national policy for climate change, as well as a strategic framework for investment and sustainable land management (Cadre stratégique d’investissement et de Gestion durable des terres – CSI-GDT).

### 1.3 UNDP in Mali

The UNDP programme for 2015-2019 was developed based on the United Nations Development

---

\(^6\) International Monetary Fund, Mali Country Report No. 15/340, December 2015.
\(^9\) At the time of the evaluation, the country started drafting the second CREDD, covering the 2019-2023 period.
INDEPENDENT COUNTRY PROGRAMME EVALUATION: MALI

The UNDP programme is built around the four UNDAF+ outcomes, which are:

1. Strengthening security, peace and national reconciliation,
2. Inclusive growth and sustainable development,
3. The promotion of good governance, and
4. Access to quality basic social services.

At the time of the evaluation, the country office employed a total of 152 personnel, including 49 staff, 12 United Nations Volunteers (UNVs) and 91 service contract holders. For the implementation of the current country programme, UNDP has had an average budget of about $40 million to $45 million a year, and has spent around $40.5 million a year on average, as shown in Figure 3.

In each of the programme areas, UNDP has, through its country programme document (CPD), identified the expected outcomes, priorities, main targets, UNDP-specific results, as well as indicative programme resources.

At the resource level, the programme area focusing on poverty reduction was the largest part of the programme, with $71 million – 38 percent of the total resources – foreseen in the CPD. The smallest share of programme resources was allocated to the peace and social cohesion outcome, accounting for about 13 percent of the total planned resources, with nearly $25 million earmarked for its programme.

---

12 The development assistance framework, named UNDAF+, is the reference document for the United Nations intervention in Mali, including the integrated stabilization mission MINUSMA. It is commonly referred to as UNDAF.
14 DP/DCP/MLI/
core resources, donor funds and government funds. The ICPE also covers non-project activities – such as coordination and advocacy – considered important for the country’s political and social agenda.

**Methodology.** The evaluation based its analysis on the results framework presented by the CPD. It looked at each of the planned results and considered their links to the programme’s objectives.

The evaluation methodology is structured around three main questions: (i) what did the UNDP country programme intend to achieve during the period under review?; (ii) to what extent has the programme achieved (or is likely to achieve) its intended objectives?; and (iii) what factors contributed to or hindered UNDP’s performance and eventually, to the sustainability of results? In addition, as gender equality is central to UNDP’s support to countries to implement and achieve the 2030 Agenda for Sustainable Development and the SDGs, the evaluation also analyses the extent to which UNDP Mali support was designed and contributed to gender equality. To answer these questions, the evaluation methodology includes triangulation of the following elements:

- An analysis of the project and programme portfolio as well as a review of programme documents, documents and reports on projects/programmes carried out by UNDP and the Government of Mali, evaluations, UNDP institutional documents (strategic plan, annual results-oriented reports, etc.), action research, and other available country-related publications. The main documents consulted are listed in Annex 4.

- Approximately 80 interviews conducted with staff of the UNDP Mali country office, representatives and staff of the authorities and government institutions at central and local levels, officials and staff of other United Nations organizations, as well as development partners, civil society organizations, and beneficiary populations (men and women) of the country programme. The institutions consulted by the evaluation team were identified on the basis of the desk review of UNDP programme and country context documents. These interviews were used to collect data and obtain a thorough understanding of perceptions from a variety of partners and development actors on the scope and impacts of UNDP’s interventions on men and women, the organization’s contributions and performance, and to determine the constraints in project implementation as well as the strengths and weaknesses of UNDP in Mali.

- Field visits allowing the evaluation team to directly identify achievements of a few key projects and conduct semi-structured interviews with beneficiaries of UNDP-supported interventions. The evaluation team visited areas of the country where UNDP has a high concentration of key projects, including Yanfolila, Segou, Sikasso, Mopti, Timbuktu and Bamako, to observe the achieved results. The identification of relevant stakeholders for the interviews was based on available project documents, dialogue with UNDP programme managers and national partners, and on the availability of individuals. In addition, appropriate safety precautions, the remoteness of project sites and air travel requirements had to be considered.

**Limitations.** The UNDP programme in Mali is being implemented in a context that remains, several years after the events of 2012, complex – especially in the central and northern regions. Access to project sites is not only limited by security conditions, but also by the geographical distance and isolation of certain territories. These difficulties have affected the evaluation mission, as they can affect UNDP programme operations. They make it particularly difficult to know exact beneficiary needs and limit the capacity to collect updated data on the situation on the ground.

The problems of access to the ground are aggravated by the geographical and thematic dispersion of the programme. With limited time in the country and only part of the evaluation team allowed to travel outside of Bamako, choices had to be made
while selecting localities and projects to visit. In addition, scheduled meetings in the capital with government, technical and financial partners sometimes suffered from calendar errors or cancellations. However, in each of the regions visited (South, Central and North), several interviews were conducted with partners, representatives of local authorities and beneficiaries.

As will be discussed in the rest of the report, the UNDP programme, and development actors as a whole, suffer from a lack of data and under-developed national capacity for production of statistics, although progress has been made since the beginning of the programme, for example, through monitoring CREDD indicators. This context is compounded by the lack of human resources dedicated to monitoring and evaluation within the country office. The mid-term review of the CPD also noted weaknesses in the programme’s logical framework, and the fact that some indicators of programme outputs and outcomes are, at least in part, inadequate for monitoring. The evaluation team therefore had to analyse some aspects of UNDP performance on the basis of incomplete or imperfect data.

Process. Following the drafting of the terms of reference for the ICPE (Annex 1) in January 2018, the IEO recruited three consultants to cover the areas of the country programme. The lead evaluator, the associate evaluator and the three consultants undertook a data-collection mission from 5 to 23 February 2018. At the end of the mission, preliminary results and key issues for reflection were discussed with the country office management and staff. Subsequently, the team drafted separate reports on each thematic area. The findings of each of these reports were then synthesized in the overall ICPE report.

The draft report was submitted to the IEO for internal peer review and review by a member of IEO Evaluation Advisory Panel, then to the country office and UNDP Regional Bureau for Africa, and finally to the Government and other partners. A videoconference workshop in September 2019 brought together key programme stakeholders and provided an additional opportunity to discuss results and recommendations, and to obtain feedback and clarification on the ICPE report prior to its finalization.
CHAPTER 2
FINDINGS
2.1 Programme objectives for 2015-2019

Finding 1. UNDP is active in all UNDAF areas and has not clearly defined specific areas towards which to target its contribution. This led to a certain thematic dispersal, as well as a multiplication of targets, making the programme objectives overall more difficult to reach. This lack of prioritization in the programme strategy also led to geographically scattered projects, further reducing their potential impact.

Programme outcomes, as well as UNDP-specific results are defined in the country programme document and summarized in Table 1.

<table>

</tr>
</tbody>
</table>
UNDP’s approach and strategy within each CPD outcome are further defined in the programme document, including the choice of partners and targets.

In the area of social cohesion and peace, UNDP’s strategy for achieving its goals focuses on strengthening the institutions responsible for the national reconciliation process, and in particular those of justice, to provide them with the technical and operational skills required to promote strengthening social cohesion and to achieve sustainable peace. UNDP also sought to mobilize the local population, through labour-intensive activities for reconstruction and rehabilitation work, in the localities where the projects aimed at giving back to the State authorities the premises necessary for their operation.

UNDP also plans to build the capacity of local authorities and civil society (traditional leaders, religious leaders, women’s and youth organizations) in the North to prevent, manage and resolve conflict. The Commission for Truth, Justice and Reconciliation (CVJR) was also targeted through support for the development of its work plan and ensuring that local authorities and civil society could participate in its implementation.

Finally, UNDP has targeted the reintegration and rehabilitation of internally displaced persons (IDPs). At the time of the evaluation, however, UNDP had not yet implemented activities in this specific area, because of the lack of agreement between the Malian Government and the armed groups on disarmament, demobilization and reintegration.

To achieve the goal set out in the area of poverty reduction and a healthy and sustainable environment, UNDP sought to strengthen partnership with civil society organizations, technical services and decentralized communities, especially for sustainable development, climate resilience and social cohesion. Priority has been given to the central and northern regions where conflicts have taken place and where disparities and inequalities are most prevalent.

UNDP focused on strengthening the capacity of national structures responsible for national policies and strategies for economic cooperation and human development, as well as bodies in charge of public financial management. UNDP targeted support towards these central structures to facilitate strategy development and institutional capacity-building. A central element of the programme in this area was Mali’s capacity to manage development aid, an area directly related to UNDP’s position among development actors. Support for economic development structures should also focus on the emergence and development of small businesses for the creation of employment and wealth.

To strengthen the resilience of vulnerable populations, the UNDP strategy has relied on working to improve the use of natural resources and renewable energy, and to reduce disaster and climate risk, for the development of economic alternatives. This work was to be strengthened through partnerships with environmental institutions, including on their planning and resource allocation capabilities.

UNDP’s good governance strategy has focused on supporting central government institutions, including Parliament, to strengthen its legislative and oversight capacities; and the Ministry of Justice, to accompany the redeployment of the judicial administration in the northern regions. In addition, UNDP has targeted support for the effective trans-
The UNDP strategy is thus first aligned with that of the country and is reflected in the objectives of scaling up the fight against HIV through the strengthening of screening services and the treatment of people living with HIV through institutional and social mechanisms operational at the local level. This is accompanied by support targeting the coordination, management and monitoring capacities of the Ministry of Health, civil society and secondary beneficiaries to effectively combat HIV. UNDP’s programme is directly linked to the UNDAF outcomes, and it is understood that UNDP is implementing projects contributing to these UNDAF objectives. It is also understood that achieving this depends on the action of the entire United Nations system, in partnership with the Government of Mali, and often in collaboration with development actors in the country. In parallel, the programme document also defines UNDP-specific outputs, which are listed in Table 1, and include goals that cannot realistically be achieved by UNDP alone. By engaging in results covering a wide range of thematic and technical areas, partnerships and targets across most of Mali’s territory, the country office has not clearly defined the development priorities to which its work would contribute. Nor did it organize its own structure accordingly. Annex 5 provides an overview of UNDP’s projects implemented in 2017, showing a programme portfolio covering nearly 40 ‘cercles’ in all eight regions of Mali.

UNDP is identified as a ‘co-lead’ in three of the four UNDAF programmatic pillars and is included in the list of partners contributing to the fourth. By taking up a central role in the activities and objectives of the United Nations programme in Mali, without always having the resources to fulfil this role, the country office has taken on a difficult task of mobilizing significant resources, in all areas of the UNDAF, and without identifying real priorities through this document. As the evaluation mission found during interviews with different partners or stakeholders, this situation created misunderstandings about UNDP’s positioning, and made it more difficult for the country office to mobilize funds.

In addition, the proliferation of projects of limited size and scope, targeting a large number of development issues and beneficiaries across the country, must be seen in light of the high-level objectives defined in the programme results framework. The results UNDP achieved could not be commensurate with the programme’s objectives and, more broadly, with Mali’s development challenges. Interviews with various UNDP partners in Mali confirmed a weakness of the programme’s logical framework also identified in the CPD mid-term review: the tenuous link between UNDP activities and the objectives of its programme.

**Finding 2.** UNDP is involved in the four thematic areas of UNDAF, with approaches and strategies that are largely distinct from each other. UNDP has not sufficiently explored synergies between activities in each thematic area of the programme.

Although programme managers, UN partners, and government partners understand that results in one specific programme area can have a positive impact on achieving the objectives of another pillar of the programme, these synergies have not been clearly explored. The CPD does not support the design of cross-cutting or larger-scale projects that would address several areas. On the contrary, and as indicated by the CPD review, the programme is implemented largely through a multitude of micro-interventions responding first to the demands of the programme donors, and only then linked to the objectives of the UNDP programme.

---

15 ‘Cercles’ are an administrative unit of Mali, a subdivision of the regional level. There are 49 cercles in total.
The fragmentation of the programme has limited UNDP’s ability to design projects that can meet multidimensional objectives.

One exception, which has yielded interesting results, is the implementation of high labour intensity work in the field of security and restoration of State authority (outcome 3 of the CPD). The project set forward an approach which integrated labour-intensive jobs, whose direct beneficiaries are the local populations\textsuperscript{16}, to achieve the project’s objective of redeploying the administration in the northern regions of the country. By including young people in activities related to the reconstruction of justice infrastructure, the project was able to contribute directly to the youth’s financial resources, but also to their training, thus facilitating their access to employment. Furthermore, by improving their economic situation, it is expected that this young population will enjoy greater social cohesion, also contributing to the reduction of local conflicts.

**Finding 3.** Not all UNDP activities, as defined in the CPD objectives, have been implemented. Differences and gaps between the planned activities and the implemented programme are evidenced by comparing indicative resources from the CPD and actual expenditures by programme outcome. Furthermore, activities in favour of IDPs have not been implemented, putting the full achievement of UNDP’s contribution to the peace and social cohesion outcome at risk.

Activities linked to the programme’s goal of “Reintegration and rehabilitation of displaced persons are guaranteed through the implementation of a durable solutions strategy” have not been implemented. UNDP’s 2017 annual reporting attributes this to the lack of agreement between the Government and the armed movements on disarmament, demobilization and reintegration.

However, other achievements in the areas of peace and social cohesion, governance and poverty reduction could potentially contribute to the economic reintegration of IDPs. The UNDP-specific result is the effective implementation of durable solutions and strategies for reintegration, which have not yet been put in place. But this area of UNDP’s programme could benefit from the results in other areas and exploit their potential contribution to this part of the programme. For example, an analysis of the needs of displaced populations could guide the UNDP response and assist in the reintegration of populations.

Regarding support to refugee or displaced populations, several sources report that the great-

\begin{figure}
\centering
\includegraphics[width=\textwidth]{fig5.png}
\caption{Indicative resources and actual programme expenditures}
\end{figure}

\*Source: CPD and Atlas Executive Snapshot

\textsuperscript{16} According to the final evaluation of the project, without an accurate record of the number of people employed, it is estimated that about 1,500 people benefited directly from these jobs, and 300 people indirectly.
est needs exist in the regions of Timbuktu, Gao and Mopti. Conflict and food insecurity are drivers of displacement and humanitarian needs. The needs expressed by displaced populations include security, food security and access to health services. These are areas to which UNDP contributes through its activities in other parts of the programme. A more multidimensional approach and a better consideration of results would, however, allow UNDP to better understand its contribution to the crisis response, even if the projects planned and specifically related to the implementation of a strategy could not be implemented.

Another aspect of the difference between the CPD’s planned programme and what is actually implemented is highlighted by comparing the programme’s indicative resources and actual expenditures by programme area or outcome.

Notably, the programme document’s financial focus on poverty reduction has not been reflected in UNDP’s expenditures. After three years of implementation, expenditures in this area reached only about 45 percent of what the CPD had planned. However, UNDP has, by the end of 2017, already committed most of the regular resources, $10 million out of the $13.5 million indicated in the CPD for this specific outcome area. This confirms two realities: the strong willingness of UNDP to invest in this area, and the difficulty for the office to mobilize external resources.

Another observation relates to the projects contributing to health services, which with $47 million in expenditures made in the current period, already exceeds the amount of $30 million foreseen in the CPD. It is unclear, however, whether this is due to new activities, or an increased investment by the Global Fund, UNDP’s lead partner in this area.

Finally, the important difference between indicative resources and actual spending in the area of peace and social cohesion should also be noted. This can be explained in particular by the non-implementation of the activities foreseen for the benefits of refugees and displaced persons, as mentioned above.

2.2 Contributions to the programme objectives

OUTCOME 1: Strengthening security, peace and social cohesion

UNDP’s main outputs in this area included sustained communication and education efforts towards conflict prevention and management. Peace volunteers and religious and traditional community leaders were trained to raise awareness on social cohesion in several localities. At the institutional level, UNDP targeted the CVJR for the promotion of transitional justice, supporting the Commission’s development of an action plan. In addition, UNDP supported the Government’s efforts to put in place a policy and action plan for the prevention of violent extremism. At the local level, UNDP projects implemented activities in support of social cohesion through local communities’ livelihoods, targeting small grain and cereal growers in particular, with microprojects on irrigation and seed distribution, as well as vocational training.

Finding 4. Within the institutional support for national reconciliation, UNDP reported the operationalization of formal mechanisms of transitional justice and intra- and inter-community social dialogue as an important achievement. But the results of the CVJR remain limited and in the field, despite the increased activities at the community level, inter- and intra-community conflicts persist. UNDP did attempt to take the underlying causes of conflict into account to improve the conditions of the population most affected.

With UNDP’s support, the CVJR has consolidated its institutional capacities, notably through the establishment of texts governing its functioning, regular meetings and the effective implementation of investigations on the ground. The Commission has collected a large number of testimonials from victims, but public hearings or reparation for victims
have not yet taken place.\footnote{As of November 2018, the Commission had collected 10,223 victim testimonials. The first public hearings were planned to take place in December 2018 (source: Journal du Mali, 8 December 2018).} Given the Commission’s current capacities and its extremely complex and wide mandate, the results achieved are still insufficient to address deeply rooted causes of conflict at the community level.\footnote{The CVJR mandate includes investigating a large number of rights violations, covering the a very long period, from 1960 to 2013.} In addition, a survey conducted in 2017 among the Malian population revealed that 63 percent were unaware of the Commission’s existence. Although that figure has come down from 75 percent the previous year, it is still relatively high.\footnote{Friedrich-Ebert-Stiftung, Bureau Bamako, ‘Mali-Mètre – Enquête d’opinion “Que pensent les Maliens?”’, Nr. 9, 2017.}

On the ground, the programme has implemented awareness and training activities focused on conflict prevention and resolution for the benefit of civil society and community leaders. However, in view of the persisting inter-community conflicts, it is questionable whether the interventions implemented by UNDP can be sufficient to achieve the goal of social cohesion and especially of culture and education for peace, which seem far beyond the control of UNDP only. The causes for the conflicts’ persistence include the weakening of State authority, delays in the implementation of key segments of the Peace Agreement, such as disarmament, demobilization and reintegration of armed groups, and the fact that the crisis itself is spreading to the Centre of the country. These factors undoubtedly contribute to reducing the effectiveness of existing strategies for appeasement and national reconciliation.

UNDP’s 2017 annual reporting mentions, as an indicator of its programme’s success, a diminution of conflicts in Timbuktu and Gao, going from 4 to 0. However, in 2017 and 2018, many sources still report regular clashes in the northern and central regions, with civilian casualties in different communities. The report of the UN Secretary-General on the situation in Mali on 25 September 2018\footnote{S/2018/866.} reports a death toll of 287 civilians over the reporting period, the highest number since the deployment of MINUSMA.

Finding 5. Some contributions to the goal of social cohesion as well as that of reintegration and rehabilitation of IDPs were obtained indirectly. But without a systematic integrated approach to exploit the results of other areas of the programme, these contributions are not measured, remain fragile, and are less likely to be sustainable.

Awareness-raising and training in the areas of conflict prevention and peace management are indirectly supported by strategies for bringing public services closer to the populations, developing access to basic social services, and promoting economic opportunities for people particularly vulnerable to the crisis, such as young people vulnerable to recruitment by armed groups. These contributions, taken in an integrated way, can certainly help to stabilize the unstructured environments caused by the crisis and the inequalities it has accentuated.

Generally, the trend since 2014 shows an increase in the number of Malian refugees in neighbouring countries\footnote{Mauritania, Niger and Burkina Faso.} with over 118,000 in September 2012, and nearly 140,000 in October 2018. The number of IDPs, following a sharp decline immediately after the conflict and a stabilization period in 2016 and 2017, has increased again in 2018.

The reasons for IDPs’ departures\footnote{DTM Mali, ‘Matrice de Suivi des déplacements’; December 2014.} and the needs expressed by Malian citizens\footnote{Friedrich-Ebert-Stiftung, Bureau Bamako, ‘Mali-Mètre – Enquête d’opinion “Que pensent les Maliens?”’, Nr. 9, 2017.} illustrate that the populations of the North are particularly preoccupied by issues of security, unemployment and food insecurity – these three challenges are also among the most important for the populations of Timbuktu, Gao, Segou and Mopti. The needed transformational changes require long-term investments and efforts from all development partners. Because they directly address the issues of concern for vulnerable people and refugees, the work of other agencies, such as the International Organization for Migration, United Nations Population Fund...
UNFPA), Office of the United Nations High Commissioner for Refugees (UNHCR) and World Food Programme (WFP), is particularly relevant to UNDP’s goals in this area, although partnerships with such agencies appear to take up only a small part of UNDP activities.

Finding 6. UNDP contributions in the area of economic development and inclusive growth first took place at the central level, through effective improvement of economic policy formulation and planning and business climate reform efforts. While results in the development of some sectors of the economy are apparent, poverty rates remain high despite several years of economic growth. The questions remain of whether the economic policies can be effectively implemented, and whether economic growth in Mali is truly inclusive.

Although important challenges to Mali’s economic development persist, UNDP has contributed to the institutional partners’ efforts to find solutions to the structural problems of the economy. For example, contributions to the development of the mango industry have increased its share of exports in 2016, thereby augmenting foreign currency inflows. Significantly, UNDP’s work has enabled the Government to become involved in supporting this sector, resulting in the development of its trade capacity and the replication of these activities in other sectors. While its support has been crucial, UNDP cannot attribute the positive results of an entire section of the economy to its sole action, at the risk of losing credibility with its partners.

The solid economic growth continuing since 2013 has not yet allowed the country to return to lower, pre-crisis poverty levels, particularly in the North. The growth rate in the primary sector is declining relative to other sectors, which are more often set in urban areas. While UNDP is highlighting results in the area of economic growth, due in particular to the creation of income-generating activities (IGAs) in agriculture and agri-food processing, food security is deteriorating in at least one part of the country. Given the programme’s stated objective of contributing to growth that benefits the resilience of the most vulnerable people in rural areas and reducing inequalities, this raises the question whether the interventions are adequate for the achievement of the desired results.

Inclusive and sustainable growth is the programme area where the organization had envisaged investing the largest share of its resources. UNDP has implemented the most projects in this sector over the period, with a total of 40 active initiatives. The large array of approaches included several projects in support of rural agricultural capacities and economic resilience, with the development of value chains (production and transformation of mango, shea and gum arabic), directly contributing to beneficiaries’ livelihoods. Other projects in UNDP’s portfolio helped to increase access to renewable energy (installation of multifunctional platforms) and water (rehabilitation of water wells or irrigation systems). At the central level, UNDP supported the Government’s efforts to better coordinate and manage development aid, through the establishment of the country’s new development framework for 2016-2020, direct support to the Aid Harmonization Secretariat (SHA), as well as improving the availability of baseline data on SDGs. UNDP helped develop and diversify Mali’s trade capacities through national strategies on business climate and agricultural production for export. Finally, UNDP’s activities targeting disaster risk reduction and environmental protection occurred through the formulation of a disaster risk reduction plan at the national and local levels, and the formulation of an investment plan for greenhouse gas reduction and climate change adaptation.

In the area of development assistance planning, UNDP support has strengthened the country’s capacity to centralize and analyse external aid data, improve planning, and thereby directly and indirectly contributed to increasing its effectiveness. The status, capacities and role of the SHA are better recognized and its input is appreciated by line ministries and technical and financial partners. However, many partners question UNDP’s ability to coordinate UN action, negatively affecting this contribution to the SHA.

**Finding 7.** Support for the formulation of the 2016-2018 CREDD is a recognized contribution by many government partners and provided a gateway for the integration of the SDGs into national development strategies. In a context where support to numerous development strategies may have contributed to a scattering of UNDP’s programme, the SDGs offer an opportunity to refocus and better define its programme.

UNDP provided key support to the formulation of the CREDD 2016-2018 as well as its results framework and the definition of indicators. UNDP’s parallel work on prioritizing and integrating the SDGs into Mali’s national development strategy is noteworthy not least because it has also led to the establishment of a baseline on these goals. But UNDP must ensure that the country can itself monitor the SDGs in the long run. While many development partners are not fully familiar with UNDP’s strategy in Mali, the SDGs are a real potential entry point for its support to the country’s development.

Through its support at the central level, UNDP has contributed to the formulation of many national strategies, such as the CREDD, the Specific Development Strategy (SSD) for the North, the CSCRP, the SDGs, and the Common Country Assistance Strategy. However, some perceive these strategic documents as an end in themselves, and that support for their preparation does not constitute a coherent approach for UNDP’s development programme. Because this upstream support provided to the Government is based on UNDP’s programme, which has very distinct thematic areas, the numerous strategies lack coherent linkages. This further reinforces the scattering of UNDP’s support, and weakens the Government’s capacity to implement and evaluate its strategies, policies and programmes.

UNDP support at the strategic level has enabled Mali to present its voluntary national report on the SDGs to the UN Economic and Social Council, and the report also acknowledges UNDP support for prioritizing SDG targets. However, the report also points to significant gaps in the full integration of the SDGs into sectoral strategies and plans. Moreover, it recognizes the need for improved coordination and coherence in the implementation of these government strategies in the different sectors of activity, a need which can represent an opportunity for future UNDP engagement.

**Finding 8.** Support at the local level has contributed to the resilience of vulnerable communities in rural areas through several targeted interventions. But some examples of successes, especially in cases where the benefits are likely to be unsustainable, do not ensure contribution to the programme’s objective as it is formulated, the result of too great an ambition, an inappropriate approach and limited means.

The CPD indicator in this area, the incidence of poverty, has increased compared to the baseline situation, and although at the country level it has fallen significantly, the targeted rate of 21 percent remains out of reach. In addition, the poverty incidence rate has increased again in rural areas in 2017, where UNDP operates, and where this rate is also the highest.

Although UNDP has highlighted a relatively large number of people who have benefited from IGAs, questions persist on the scope and sustainability of the results. The IGAs implemented with the target population are mostly in the agricultural and agro-processing areas, but by 2017, people in the

---

26 The 2017 EMOP survey reports a poverty incidence rate of 44.9 percent, whereas the baseline value in the CPD (no year) is 43.6 percent.
North were facing increased food insecurity. The 2017 National Survey on Food and Nutrition Security (ENSAN)\textsuperscript{27} reports 11 localities where more than 40 percent of households are affected by food insecurity\textsuperscript{28}. The situation also deteriorated significantly in seven localities\textsuperscript{29}, compared to the 2016 survey.

Building the resilience of vulnerable populations through training in different trades is a good approach, but it must be followed up to ensure impact. For example, one result presented by the country office relates to the work opportunities offered to local people as part of the rehabilitation of the judicial infrastructure under outcome 3. This is a good example of an approach that includes cross-cutting links between UNDP programmes, and these activities have indeed provided an income and a formative opportunity for young people. However, these IGAs are ad hoc and finish at the end of the project, and cannot be considered to be truly sustainable. Thus, they cannot in themselves be a contribution to the resilience of vulnerable populations and, moreover, highlight problems in project design, the consequences of programme fragmentation and lack of strategy in UNDP’s overall approach.

However, the programme has also established local structures at the community level, which have accompanied the anchoring and popularization of good agricultural production practices. The involvement of local authorities in these projects has led to some ownership, with the establishment of local committees at the intervention sites, and the dissemination of good practices at the local level. UNDP could significantly increase its impact by partnering with other UN agencies such as WFP or Food and Agriculture Organization (FAO)\textsuperscript{30} on these projects.

Finding 9. In the area of environment, natural resources and resilience to climate change and disasters, UNDP support has also been active at the local community and at the institutional levels. Appreciable results have been obtained in both cases, but they are still far from the desired scope, and remain difficult to measure.

The installation of solar platforms in rural localities is recognized as an excellent initiative, but its sustainability is not evident. The project visits to multifunctional platforms (PTFM) showed that these investments were appreciated, and answered the needs expressed by local communities. But it also brought evidence of dilapidated equipment, barely functional after multiple phases of an initiative to which UNDP has been contributing for almost 20 years in Mali. The new project document (‘5000 villages’, started in 2016) recognizes some of the installations from previous phases are no longer functioning and require rehabilitation. The new project’s design, however, also includes elements for the gradual disengagement of UNDP and the sustainability of its activities, and a feasibility study has been conducted to transform the PTFM project into a national entity. For this transition to be successful, it will have to take into account the key lessons that have emerged over the many phases of the project’s more than 20 years of existence.

Apart from these specific initiatives, and in view of the extremely low rate of access to electricity in rural areas – a rate which has fallen sharply since 2012\textsuperscript{31} – the support for the use of renewable energies remains limited to constitute a contribution to the programme objective.

Finally, UNDP contributions to planning and resource allocation capabilities by environmental institutions resulted in the development of several strategic...
documents, action plans and publications on environment and climate change, and the effective integration of these issues into the CREDD. Some progress can also be noted on the decentralized capacities for environmental action, through the development of municipal plans integrating the issues of climate change and biodiversity, and the extension and reinforcement of protected areas. Although preliminary steps have been fulfilled and the file transmitted to the National Assembly, the Protected Areas Management Authority had not been created at the time of the evaluation, because of a lack of political will and absence of climate change considerations in economic development strategies. Institutional results can be transformational only if the structures in place at the central, regional and local levels can ensure the implementation of the country’s environmental priorities.

**Finding 10.** UNDP has contributed to significant efforts for the redeployment of State structures in the northern regions, and has helped to restore the administration’s infrastructure, in support of the establishment of interim authorities that resulted from the Peace Agreement. But not all the built or rehabilitated infrastructure are functional, and because the security situation remains critical in some localities, the public servants assigned to them rarely occupy the buildings.

The redeployment of State structures in the northern regions, where they have been absent or very precarious since the onset of the security crisis, is a direct contribution of the programme in the area of governance. It also contributes – indirectly – to the UNDP outcome for national reconciliation, while it has also benefited local populations through income-generating activities. The programme helped to restore the infrastructure park of deconcentrated and decentralized administrations in the northern regions, making it possible to house the interim authorities resulting from the Peace Agreement, and the reopening of certain local jurisdictions. The 44 entities built or restored have allowed the administration to regain presence on the ground, and consequently the availability of strategic public services such as those related to justice. This return of the State at the local level is also a factor of social stabilization, since it fills the void that resulted from conflicts in the area.

However, the impact of the redeployment of the State and its technical services, which has suffered from the deterioration of security in the North and the Centre, must be put in perspective. All facilities built or rehabilitated do not operate systematically and many of the staff assigned to them remain in the capital and other urban centres where they feel safer.

**Finding 11.** In addition to the restoration of State authority in the North, UNDP has articulated its governance support programme around the capacity of the Malian Parliament for its oversight role in the management of public affairs and institutional capacity-building in support of decentralization efforts.

At the institutional level, the Parliament and the Supreme Court have been supported to better exercise their oversight mandate vis-à-vis the executive power. All the technical commissions and parliamentary groups in the Assembly and Supreme Audit Section Advisers have benefited from capacity-building processes, and transformational results are visible. In a sign of parliamentary vitality, the chamber had four
government interpellation sessions in 2016, whereas none took place in 2015. The same year, it also initiated two proposals of laws, also compared to none previously. The Accounts Section of the Supreme Court audited the management of 39 percent of local authorities in 2016.

The added value of the programme in the field of decentralization is particularly anchored in the Directorate-General of Territorial Communities. It is evidenced, for example, by the creation of a framework guiding the sector’s policies. A National Decentralization Policy covering the 2015-2024 decade and its Action Plan are available. Above all, and relevant to the national context, the sector has also developed an Inclusive Decentralization Programme for Peace and Reconciliation, which is the basis for implementing the Decentralization Component of the Peace Agreement. The decentralization process is also supported by a portion of the national budget transferred to local authorities, which increased from 3.1 percent in the pre-programme period to 18.3 percent in 2017.

**Finding 12.** In the area of elections, the work done by UNDP prior to the start of the current programme has yielded successes that are recognized by many technical and financial partners and within the Government. This has allowed UNDP to position itself effectively in this area, and to extend its support to the elections in 2016, including through initiatives aimed at the development of civil registration data.

UNDP’s contribution to the 2013 elections was considered essential by most UNDP partners. The office played a determining role in the conduct of peaceful elections, which saw higher voter participation, notably thanks to UNDP’s ability to coordinate and work with partners. The trust fund established for the elections had 12 contributors.

The programme has supported the country’s finalization of the Administrative Census for Civil Status. As a consequence, the inclusiveness of the electoral process has improved: the communal elections held during the cycle were based on a biometric file of 7.5 million voters, close to half of the total population. On the other hand, civil society engagement in the electoral assistance programme has had to be reduced, as recommended in the evaluation of the Support to the Electoral Process in Mali (PAPEM) project, since engaging with 107 non-governmental organizations as initially planned would potentially have led to a further scattering of the financial assistance provided to such organizations.

**UNDP’s main activities in support to the objective of improving Malians’ access to health services directly derived from its renewed role as principal recipient of the HIV/AIDS grant, funded by the GFATM. UNDP aimed to strengthen the national capacities for HIV/AIDS screening and treatment, training of medical staff, as well as the provision and distribution of medicine and equipment.

**Finding 13.** The programme mobilized significant resources for the fight against HIV/AIDS, which also represented its main budget component: almost $50 million was mobilized from the Global Fund. This represented more than 65 percent of the total financing for the fight against HIV/AIDS in Mali. A significant portion of these funds was spent on medicines and health services management costs, thereby addressing an important need for the country, but the treatment of HIV infections remains insufficient, and far from attaining the programme’s objectives.

UNDP, as the main recipient of the Global Fund, collaborates with – and helped build the capacity of – five national entities: the AIDS Unit in the Ministry of Health, the Technical Secretariat for AIDS Control at the level of the Presidency of the Republic, civil society (through national NGOs ARCAD/Sida and SOLTIS), and finally the People’s Pharmacy of Mali, for the storage of medicines. In addition, midwives and nurses have been trained in patient treatment, which has helped to improve the provision of treatment services and decentralize such services to the level of community health centres.
The programme also supplies drugs, reagents and consumables. However, the regularity of this supply suffers from structural problems (lack of electricity and inadequate storage conditions) as well as disruptions, and large quantities of medicines that are approaching the end of their shelf life. These problems are recurrent and have often been raised in Mali, without finding appropriate solutions, even with UNDP’s involvement.

The number of screening sites has increased significantly, and these are expected to eventually become treatment sites. In addition, 199 sites for the care and treatment of HIV/AIDS, as well as four national structures for prevention and medical care are operational throughout the national territory, which have contributed to the detection and treatment of infected persons.

Most of the treatment sites and the largest number of patients on anti-retrovirals (ARVs) are in the south-west of the country, in the regions of Koulikoro, Kayes, Sikasso and Bamako. The remainder is distributed among the sites of Mopti in the Centre and those of Timbuktu, Gao and Kidal in the North. Notably, more than half of these patients are monitored at the sites of the District of Bamako, which underlines the need to further develop service provision in other regions. In addition, half of ARV patients are followed by medical, paramedical and administrative staff from and managed by civil society organizations operating in public and parasatal structures.

However, the pace of progression of treatment of HIV infections is far from sufficient. In fact, just over a year from the end of the programme, the proportion of treated patients is only 45 percent, down 5 percentage points from 2013, and especially still far from the programme’s target of 90 percent.

Cross-cutting issues

Finding 14. In the programme’s results framework, only one out of four outcomes, and one out of eleven UNDP-specific results, clearly and specifically mentions targeting women. Despite this weakness in the programme design, women and youth have benefited from UNDP interventions, and there is some progress achieved through UNDP’s work in the areas of women’s participation and representation in electoral processes.

In terms of economic recovery, women benefit from most interventions – although they are not always the project’s specific targets, their place in society makes them preferred beneficiaries. Income-generating activities have essentially benefited them, alongside the youth, a large proportion of whom are also women. Capacity-building around resilience strategies also benefited them significantly. Basic community infrastructure, such as multifunctional platforms, solar energy and micro hydro-development schemes also allowed women to develop an activity and increase their incomes.

In the context of national reconciliation, while the programme remains gender blind in its design, it has contributed to raising awareness in favour of a culture of peace, and strengthening conflict prevention and resolution capacities, particularly with civil society, many of them directly addressing women.

But some interventions also directly targeted gender equality and the protection of women’s rights. For example, in the governance programme, and specifically in the area of justice, the promotion of women’s rights and the fight against gender-based violence, were clearly gender-targeted activities. The evaluation team observed, for example, that students from the National Police Academy had received training on the protection of women’s rights and were putting these principles into practice in their daily work.

Still, in the area of good governance, UNDP’s support to electoral processes has amplified advocacy for greater participation of women in the electoral process as voters and as candidates, including through awareness campaigns targeting women and men. Activities promoting women’s leadership contributed to the process that led to the adoption of the law on the promotion of gender in the nominative and elective functions in November 2015. The current Government (established on 13 September 2018) includes 11 women ministers on a total of 32, which is a ratio of 34.3 percent, and represents a
slight improvement compared to 2016 which must be encouraged, particularly in a general context of limited female representation across all sectors.

In the health sector too, the fight against the AIDS pandemic has produced notable results for women in general, pregnant women in particular, and children. Significant efforts have been made to ensure that women and children have access to services, and the decentralization of treatment has helped to bring women closer to services with less stigmatization. As part of the capacity-building activities, midwives and nurses were trained to perform the necessary treatments and to address the shortage of doctors in the community health centres.

It should be noted, however, that these results – although notable – do not constitute real transformational changes, and are not yet adequate to addressing the main socio-economic barriers in Mali: culturally strong inequalities in roles, responsibilities and the status of men and women in society; the structure of economic and family systems, particularly with regard to ownership of the means of production; the current rise of religious obscurantist tendencies that threaten recent and still fragile progress. The country still lacks qualified human resources and a willingness to address challenges and ensure that gender dialogue takes place at all levels of society. These are issues of a magnitude too important to hope for results through limited and fragmented interventions. UNDP has not been able to address them effectively, lacking a gender strategy encompassing the entire programme, and taking into account cross-sectoral contributions to gender equality and women’s empowerment. The 2015-2019 programme was developed while the country office did not have a gender strategy, or a gender specialist in its staff. This certainly explains the lack of consideration of gender equality and women’s empowerment in the programme’s statements of results and outputs.

**Finding 15.** The recruitment of a gender specialist in 2016 helped the country office in developing its gender strategy, offering prospects for a better contribution of the programme to more gender-responsive and even transformational results.

The recruitment of a gender specialist in the country office in 2016 occurred after five years without a dedicated gender position. This situation negatively affected gender-sensitive data collection and the establishment of relevant indicators for the programme. These are also five years in which the country office has not been able to capitalize on the knowledge needed for the strategies in each thematic area. This is highlighted by the shortcomings of the programme’s results framework, in terms of gender-targeted results and indicators. Consequently, it is still difficult to measure programme changes in this regard.

At the time of the evaluation mission in Mali, the country office, with the support of the gender specialist, had come to develop its gender strategy for 2016-2020. The specialist also worked to ensure that gender equity and women’s empowerment were considered in strategic planning processes and project formulation.

In order to achieve significant results on gender equality and women’s empowerment through its projects, the question of the capacity of all office staff needs to be addressed. A single gender specialist alone cannot deliver the expected results. Although a gender team has been formed (including management and programme managers), the field programme coordinators also need to be trained and sensitized, especially to ensure the feedback of data and information, as well as for a better consideration of women’s needs in programme implementation.

Training of the gender team should also allow for more effective collaboration and the search for synergies with other UN agencies on gender issues. The evaluation mission observed that other agencies, such as UN Women and UNFPA, were working on topics directly related to UNDP projects, such as gender-based violence.

**Finding 16.** The contribution of UNVs to programme implementation and achievement of results has been significant. They are involved in all areas of the programme and have helped mobilize volunteers who are close to the communities and
know the field. However, UNVs were not included in either the UNDAF or the CPD results framework. UNDP must recognize and better exploit the potential of UNV engagement on the central issue of youth in Mali.

The country office has nine UNV staff and the CPD review reported that 23 volunteers participated in the implementation of the programme. Field project offices employ UNVs, who are sometimes responsible for sensitive projects.

More specifically, the contribution of UNV was made through the mobilization of national and international volunteers for the PAPEM project, where they served in the governorates of the eight regions of Mali as electoral advisers. As part of the activities related to peace and social cohesion, they intervened as trainers and participated in awareness-raising activities, particularly targeting the youth. UNDP has benefited from their knowledge of the field and their proximity to the targeted populations, which is a specific asset of UNV in supporting young people while promoting their inclusion in peace and sustainable development processes. In parallel, the corporate youth strategy of UNDP is guided by the promotion of youth’s role in development. The partnership between UNDP and UNV plays an important role in designing initiatives that can support capacity and skill building of young volunteers and contribute to peace and development.

Youth are recognized as central to development in Mali: people under the age of 15 represent the largest part of the population (see Figure 6), but also have one of the lowest school enrolment rates in sub-Saharan Africa: 68 percent of young people have never been to school, are out of school, or have dropped out of school. Young people also suffer from a high unemployment rate, estimated at 14.9 percent for all 15-35-year-olds, and up to 21.9 percent for 15-24-year-olds.

This situation of a large youth group having had limited access to schooling and suffering from a high unemployment rate increases inequalities in the country and represents a particularly important issue for social cohesion and peace. Unemployed youth are more vulnerable to radicalization and inter-community conflict. Many UNDP partners and beneficiaries raised the issue of youth during interviews conducted by the evaluation mission. Some also deplored the lack of sustainability of actions for young people. It can be considered that ad hoc activities, with real but temporary benefits for young people – such as high labour intensity work – can also create frustration and resentment. Also, as mentioned in the PAPEM evaluation, UNV services were terminated at the end of some projects, while they would have been particularly important for the continuity and anchoring of the results.

Work with and for young people, as well as the promotion of volunteering, for example, are principles...

---

34 EDS survey, 2010.
found in UNDP activities in Mali, but in a diffuse way and without strategic inclusion of the question of youth in the programme. The UNDP 2014-2017 Youth Strategy provides guiding principles for achieving results in three areas of particular relevance to the UNDP programme in Mali: sustainable development, inclusive democratic governance, and resilience. For the sustainability of progress in the protection and inclusion of young people, the strategy also mentions the importance of supporting the development of national policies to influence the legal framework and ensure the mobilization of human and financial resources.

2.3 Factors

Positive factors

Finding 17. Overall, the programme demonstrates a good balance of work at the central and local levels. In addition, the interventions take into account local needs in the different areas of intervention.

The analysis of programme results shows that UNDP has been able to balance its action between upstream interventions and on-the-ground (downstream) projects directly benefiting local populations. UNDP’s intervention at the central government level includes project-related activities (for example, with the reform of the justice system, or the National Export Development Strategy), but also non-project activities, including coordination, outreach efforts and informal consultations with ministries and development partners.

Upstream activities are facilitated by generally good UNDP-Government relations, and an appreciation of UNDP’s technical capabilities by the Government. An analysis of the 2015 and 2017 partner surveys results also shows a strong increase in favourable responses to the assessment of the quality, efficiency and professionalism of UNDP by government partners. Successful upstream activities allow for a good alignment of programme activities with national strategies and ensure the relevance of its programme in the future.

With regard to downstream activities, most beneficiaries said they appreciated the fact that they were consulted and that their needs were taken into account in programme design. Needs assessment efforts upstream of project design are recognized, and here again ensure the relevance of UNDP’s action.

Finding 18. The partnership initiated with the Government, technical services and local communities has been successful in some cases. Overall, the institutional partnerships which were founded upon UNDP’s proximity to the Government and technical services, have yielded tangible results and allowed the country office to progress towards the achievement of some of its goals.

The partnership – and generally good collaboration – with national actors at different levels has led to key results for the programme. At the central level, for example, important work included UNDP’s contribution to the CREDD, but also sectoral strategies, emergency plans and strategies for the economic development developed in partnership with the ministries and technical services.

At the local level, partnerships with local communities have enabled the effective targeting and completion of infrastructure rehabilitation works for the restoration of State authority in the North. The work capacity of these communities has been restored and, as part of the programme for access to basic health care, the provision of services by community health centres has been restored.

Overall, institutional partnerships have yielded tangible results that have allowed UNDP to move towards the achievement of its goals. Proximity to the Government and technical services is an asset for the country office, which is also recognized by other UN agencies and bilateral partners. This is an advantage that UNDP can leverage for better collaboration and achievement of development goals.

Finding 19. In implementing its programme, UNDP has applied the fundamental principles of human

rights, gender equality and women’s empowerment and environmental sustainability. It is an added value of UNDP, which is a recognized actor for the integration of social and environmental standards in its interventions.

UNDP has made efforts to target vulnerable populations in the design of its projects, and to take their specific needs into account. The programme also includes a few initiatives specifically aimed at gender equality and the empowerment of women. With the new gender strategy, the country office offers encouraging prospects of a more effective targeting of women in future projects.

Integrating the fundamental principles of human rights in its projects enables UNDP to accompany its programme implementation activities with advocacy and outreach efforts on questions that are at the centre of UNDP’s mandate. Furthermore, the advent of the SDGs, and their integration into the national development strategy, gives UNDP an opportunity to expand its programme, while anchoring it on specific targets.

### Negative factors

**Finding 20.** The implemented projects did not systematically and effectively take risks into account, leading in some cases to significant delays in the execution or cancellation of planned activities. Weak risk-mitigation efforts affected the achievement and sustainability of results.

Project documents and implementation monitoring tools (for example, in the Atlas system) contain risk matrices, most of which are completed. These matrices include identified risks and suggested solutions. However, for many projects, the security situation and intensification of conflicts have been cited as justifications for implementation delays, non-achievement of results or cancellation of certain activities.

The security context, particularly in northern and central Mali, constitutes an important obstacle for development projects. But this situation was known at the time of programme design and when most of the current projects were being prepared. The risk-mitigation strategies and responses provided in the project documents were therefore insufficient to effectively manage the risks.

Project documents, for example, contain inappropriate solutions, such as “Systematic monitoring to observe all signs of insecurity and react in time”, which is a vague answer without any real proposal for action towards the identified risk of “resurgence of hostilities and persistent insecurity”

In projects particularly sensitive to the security situation, and especially ones suffering in terms of implementation and sustainability, the risk management efforts have been insufficient.

Although the CPD does include a chapter dedicated to risk management, it does not present a clear strategy on dealing with conflicts, other than through the diversification of partners, and the assertion that an “analysis in a conflict situation will be carried out as part of the development of new projects to mitigate their vulnerability to conflict risks”.

Although some new projects have more detailed risk matrices (for example, the Fighting Mali’s Conflict Factors Through the Rule of Law project), this is not really an analysis as outlined in CPD, and the approach is still not systematic.

UNDP, however, has tools at the regional and global levels to design and implement programmes in a context of insecurity and better achieve the objectives of its programme. It is also working with partners – in particular MINUSMA – which face the same challenges and can help UNDP find appropriate responses.

**Finding 21.** Most of UNDP’s projects are carried out outside of the capital, Bamako, including in remote and hard-to-reach locations. UNDP is limited in its capacity to implement and monitor projects at the local level, which in some cases has led to difficul-

---

38 Regional project document, ‘Preventing and responding to violent extremism in Africa: a developmental approach’.
ties in fully achieving planned results. The country office has made recent efforts to expand its local presence, which could improve UNDP’s ability to support efforts on the ground.

UNDP staff managing field activities do not always have the technical or material resources to cope with the contextual and implementation challenges in those areas. These difficulties are aggravated by the multiplication of micro-interventions, which require increased coordination and monitoring capacities. With limited presence near the more remote project locations, UNDP has in some cases failed to address certain issues in time, for example when rehabilitated justice infrastructure in the North were not occupied, or when multifunctional platforms stopped functioning properly.

In addition, the UNDP programme includes activities related to the transfer of competencies to local governments, the development of local action plans for disaster risk reduction, and the strengthening of decentralized institutional capacities. These objectives require a strong presence, supported by an effective capacity to deliver policy advice at the local level.

During the evaluation mission, the country office confirmed that it was making efforts to strengthen its local presence, particularly in Mopti, Gao and Timbuktu, by creating positions for experienced field coordinators. Although incomplete at the time of the mission, these recruitments are expected to improve UNDP’s local capacity and complementarity of actions on the ground.

**Finding 22.** The evaluations carried out during the period under review found significant weaknesses in the country office’s project monitoring, which was confirmed by the observations of the ICPE mission. The country context, combined with the country office’s weak monitoring capacities, made it very difficult to carry out project visits and report on achieved results. This has had significant implications on the way UNDP has been viewed by development partners, as well as its ability to attract funds.

At the time of the evaluation mission, barring one focal point within the Project Support Unit, the country office did not have a dedicated person to monitor and evaluate the programme. In addition to the internal capacity of country office staff, several factors have a negative impact on the monitoring and evaluation of projects implemented by UNDP. The fragmentation of activities across different thematic areas, but also the large number of projects implemented in many regions of the country, including some that were inaccessible due to the deterioration of conflicts, all together represent an important challenge for the country office’s efforts for project monitoring. By implementing a multitude of micro-projects, UNDP needs to collect a multitude of data to ensure the smooth running of its activities, in an environment that does not allow it.

Another source of difficulty is the inadequate results framework, which does not allow monitoring projects’ progress and measuring the achievement of UNDP’s objectives or its contribution to the country’s development. The CPD mid-term review found weaknesses in the logical framework, with some non-measurable indicators, or objectives to which project implementation cannot realistically or effectively contribute. In addition, information on some indicators cannot be collected, due to a lack of data sources available during the implementation of the corresponding projects.

The combination of these factors means that UNDP faces significant challenges in reporting on its activities and results, even in cases where projects are successful in meeting their objectives. This is also sometimes perceived as a lack of transparency on the part of UNDP. As a consequence, several partners expressed ignorance of what UNDP was doing in Mali and the results achieved by the programme, going so far as to consider that UNDP’s presence in Mali did not make any difference to the country’s development. This situation can be considered to have a negative impact on the ability of UNDP to mobilize resources.

**Finding 23.** While UNDP is a designated co-lead in three of the five outcomes of the UNDAF, it has so far not been able to coordinate the work of UN agencies effectively. In particular, while they could have a very positive impact on UNDP’s results, the
strong linkages between UNDP’s and MINUSMA’s mandate have not been sufficiently explored.

In Mali’s complex development context, it is even more important that the United Nations and other development partners should coordinate their actions, seek synergies and strengthen the complementarity of their programmes.

The evaluation observed significant but still recent efforts to coordinate UN activities in Mali. Several government partners also expressed appreciation for UNDP’s ability to bring development partners together, formally or otherwise, to share information on ongoing programmes or future challenges. Working groups in specific areas exist and allow partners to consider potential joint initiatives. In practice, however, those efforts have not yet led to effectively coordinated action by the UN in Mali.

At the programme implementation level, there have been few common activities, and technically no joint projects. While efforts have been made to set up such projects, none were in progress at the time of the evaluation. Furthermore, UNDP has played a key role in preparing the integrated UN transition planning process in Mali, in support of a common repositioning of MINUSMA and UN agencies and programmes. But at the time of the evaluation, this transition plan was still in draft, and had not yet resulted in increased common efforts on the ground. In theory, there are strong linkages between the mandates of UNDP and MINUSMA, since stabilization efforts can lead to increased security, improved access to basic services and poverty reduction. UNDP’s projects in support of social cohesion, access to justice and the restoration of State authority are closely linked to immediate and long-term efforts of MINUSMA to resolve the crisis in Mali.

Additionally, given the challenges UNDP encountered in implementing and monitoring projects in areas still affected by conflict, it may not have sufficiently sought to benefit from the stabilization mission’s presence and logistical capacities. As a result, some partners were very critical of the lack of coordination between UNDP and MINUSMA, which should be their main allies on the ground. Partners in the UN system have also indicated their ability to develop projects with government partners without the support of UNDP.

The difficulties encountered by UNDP in reporting on its activities and results, and thus demonstrating its added value and positioning itself for the development of Mali, do not facilitate its cooperation efforts, particularly with the other UN agencies. And in the current state, the various development actors are forced to compete for funding.

**Efficiency and financial resource management**

**Finding 24.** Analysis of programme expenditures shows a high implementation rate and relatively low management efficiency ratios, below the regional average. The country office visibly has the required capacity for programmatic budget management, but financial risks are still present and have sometimes had an impact on UNDP’s reputation in Mali.

The performance of the country office in terms of spending annual budgets is good. While in most programme results areas the implementation rate was lower in 2015, it improved in subsequent years, reaching or even exceeding 100 percent execution. This is probably due to a catch-up effect in the financial implementation of projects in the years following the start of the programme.

However, the 2016 internal audit report highlighted some financial risks, particularly in terms of transaction control, as well as weaknesses in the financial monitoring and closing of projects. The audit also made recommendations on the mechanisms in place for initiating projects, as well as controlling travel and procurement expenses.

The evaluation team identified at least one project where financial partners were dissatisfied with the delays in closing and sharing of financial reports by the country office, which were done two years after the end of activities. In addition, differences in the amounts reimbursed to donors could not be explained, further adding to the partners’ dissatisfaction, potentially affecting their future collaboration with UNDP on similar projects.
In response to the risks highlighted by the internal audit, the country office has put measures in place to monitor financial implementation. Renewed collaboration between the operations and programme departments has been highlighted as a way of identifying and addressing implementation issues in time. The country office also highlighted efforts to train staff on business processes. While it is still too early to assess the cost-effectiveness implications for the country office, there are a few issues to note from the partner surveys. Between 2015 and 2017, there has been an increase in favourable responses on partner satisfaction with the efficiency of the country office. But, at the same time, the number of unfavourable responses has also increased, and exceeds the rate of dissatisfaction of UNDP partners at the global level. Government partners are particularly satisfied with the efficiency of the country office, showing that discontent is at the level of bilateral partners, who are also donors for the programme, and thus represent a challenge for resource mobilization.

Finding 25. The country office developed a new resource mobilization strategy in 2016 to support the implementation of its programme. The CPD mid-term review reports satisfactory results in mobilizing external sources of funding, but a more detailed analysis also highlights notable differences between programme areas, the heavy reliance on a small number of donors, and persisting financial risk factors.

Figure 3 provides a good illustration of UNDP’s progress in mobilizing funds in support of the planned programme. The mid-term review, in late 2017, reported a mobilization rate of 77 percent of non-core resources planned for the period. But the overall rate is not necessarily representative of the situation, and a closer look shows that there are important differences between each of the programme outcomes. The health services outcome, for example, has exceeded the targets set in the CPD, and the GFATM represents approximately $47 million in expenditures for 2015-2017, out of a total of $120 million from external funding sources, representing nearly 38 percent. This figure is about twice as much as the GFATM’s expected share of the CPD’s external resources, and this reliance on one source of funding poses a risk to UNDP. UNDP’s dependence on a small number of donors is further evidenced in Figure 8, showing that – excluding core resources – the four largest donors to UNDP’s programme expenditures represent nearly 75 percent of the total spending.

---

40 This is due to the decrease of ‘neutral’ responses.
In addition, taking into account that the budget and expenditure amounts include projects that started before the current programme, that part of the funding included in the calculation corresponds to external resources already planned for in the previous programme. This further reduces the resources actually mobilized by UNDP for the current programme.

The evaluation team noted significant ongoing efforts to mobilize resources from donors in Mali, including potential new partners. These efforts had not been successful at the time of the mission, but many opportunities existed. However, the fact that the resource mobilization strategy was developed in 2016, well after the CPD, is problematic. In addition, as demonstrated by the country office audit and partner surveys, financial risks exist and some partner discontent persists, which can affect UNDP’s credibility and its ability to attract funds. Other factors already mentioned, such as significant weaknesses in monitoring, difficulties in showing results and lack of clear strategic positioning, are all important risks for mobilizing additional resources for the current programme, and potentially for the next one.

Efficiency gains have been made through the pooling of operational services. But, in parallel, there has been a loss of efficiency due to the multiplication of small projects. The Environment, Climate Change, Inclusive Sustainable Development cluster, for example, manages a portfolio of 29 projects through both national and direct implementation modalities (NIM/DIM). Each project has at least one coordinator, a financial administrative officer, a programme officer, a management assistant, a maintenance worker and two drivers.

**FIGURE 8. Top 10 donors for programme expenditures, 2015-2017**

![Graph showing top 10 donors](image)

Source: Atlas Executive Snapshot

In addition, taking into account that the budget and expenditure amounts include projects that started before the current programme, that part of the funding included in the calculation corresponds to external resources already planned for in the previous programme. This further reduces the resources actually mobilized by UNDP for the current programme.

The evaluation team noted significant ongoing efforts to mobilize resources from donors in Mali, including potential new partners. These efforts had not been successful at the time of the mission, but many opportunities existed. However, the fact that the resource mobilization strategy was developed in 2016, well after the CPD, is problematic. In addition, as demonstrated by the country office audit and partner surveys, financial risks exist and some partner discontent persists, which can affect UNDP’s credibility and its ability to attract funds. Other factors already mentioned, such as significant weaknesses in monitoring, difficulties in showing results and lack of clear strategic positioning, are all important risks for mobilizing additional resources for the current programme, and potentially for the next one.

Efficiency gains have been made through the pooling of operational services. But, in parallel, there has been a loss of efficiency due to the multiplication of small projects. The Environment, Climate Change, Inclusive Sustainable Development cluster, for example, manages a portfolio of 29 projects through both national and direct implementation modalities (NIM/DIM). Each project has at least one coordinator, a financial administrative officer, a programme officer, a management assistant, a maintenance worker and two drivers.

**Sustainability**

**Finding 26.** The sustainability of UNDP’s results is likely to be affected by the security situation, particularly in the North and Centre. The intensification of the crisis can have an impact on project achievements, or directly on beneficiaries. UNDP has succeeded in establishing elements of sustainability in some projects, but in other cases the programme has also lacked effective exit strategies.

The review of the programme shows that some results have benefited from a good grounding at the community level, conducive to a certain sustainability. This is the case for awareness-raising activities (for example for elections, or projects aiming at social cohesion and socio-economic resilience). Support for national entities, which takes their continuity and survival into account, without relying

---

41 Of a total of 64 projects (Atlas outputs) currently implemented during the period under review, 43 had started before 2015.
on the project (CVJR, Aid Harmonization Secretariat), is another factor that supports the sustainability of the results.

But the deterioration of security and the displacement of beneficiaries can of course be a risk factor that affects the sustainability of established capacities. In the case of the State authority restoration project, this has resulted in project outputs that have been completed but not used. Without alternative solutions to ensure that what has been achieved can be used, UNDP runs the risk of losing achievements in the long run.

Lack of adequate monitoring can also compromise the full realization of some outcomes, and thus their sustainability. If a problem is not identified in time, it can potentially affect the success, even partially, of a project. This was the case, for example, with the Djiguiya cooperative in Yanfolila, where the loss of a single customer put an end to the sales of processed fruit products. Another example observed by the evaluation team is the delivery of inadequate furniture to the National Police Academy.

It may also be noted that the choice of DIM does not favour the strengthening of Mali’s own project management capacities at the institutional level. However, since DIM projects represented a much larger share of programme expenditure, it can also be considered that this choice was made by the country office to limit financial risks.

Finally, the country office’s heavy reliance on a limited number of donors, as noted in the previous section, reinforces the financial insecurity of the programme, with the risk that it will negatively affect longer-term outcomes.

CHAPTER 3

CONCLUSIONS, RECOMMENDATIONS AND MANAGEMENT RESPONSE
3.1 Conclusions

- **Conclusion 1.** UNDP’s programme in Mali is thematically and geographically scattered, which raises concerns for the effective implementation and monitoring of results. In addition, the multiplication of efforts across the programme thematic areas illustrates the lack of strategy guiding UNDP’s work in its development approach.

The programme is both thematically and geographically scattered. Geographically, this poses problems of project monitoring, limits the office’s capacity to visit projects in the field and collect data on results. In addition, the multiplication of projects increases the operational costs of the programme and complicates its implementation. Finally, UNDP has approached each thematic area of its programme in a broadly compartmentalized manner, without systematically looking for possible synergies.

The evaluation noted a good balance between interventions at central and local levels. But again, the multiplication of interventions and approaches makes it difficult to find the coherence or link between these interventions at different levels. Because of the difficulties in monitoring field interventions, the strategies developed with the Government are not, for example, systematically based on the information and results obtained through projects on the ground.

The fragmentation of the programme also demonstrates the lack of strategy guiding the work of UNDP. In practice, UNDP has tended to implement projects based on the demands of those providing funding rather than on the basis of its own strategic objectives.

- **Conclusion 2.** Weaknesses in programme monitoring and project data collection negatively affected UNDP’s capacity to address bottlenecks and implementation risks in time, as well as its capacity to communicate on what it has achieved. This has had negative consequences on UNDP’s capacity for resource mobilization.

The Indicators in the CPD Results Matrix are generally not suitable for monitoring UNDP activities and measuring results. As a result, the objectives of the programme are not realistic enough, and their achievement ultimately does not depend on what UNDP implements.

The security situation, geographical remoteness and weaknesses of the country office in monitoring and evaluation capacities have the direct consequence that the implementation of the programme suffers from a lack of field visits to identify and resolve problems encountered quickly. The weakness in monitoring also affects the ability of UNDP to measure its contribution.

However, better identifying the results obtained makes it possible to better communicate on them, and improves the visibility of the UNDP, which then helps to mobilize resources.

- **Conclusion 3.** UNDP’s position in Mali is unclear to many, affecting its ability to collaborate with development partners.

The role of UNDP in Mali is not understood by all, and many partners – including within the Government – are struggling to identify the nature of its offer, or its comparative advantages. This situation is partly due to the fragmentation of the programme, mentioned above, which decreases its visibility. In addition, the lack of follow-up by the country office on projects that are part of a results framework that is not easy to read, means that UNDP cannot effectively communicate on clear results and their impact.

Government partners globally appreciate the work of UNDP, and this recognition has increased in 2017 compared to previous years. This appreciation is reflected in UNDP’s ability to work with some ministries, technical services and government agencies on national strategies or policies. However, the picture is different for other partners, whether they are UN system members or bilateral partners. Some partners expressed frustration that UNDP was positioning itself in areas more related to its own activity, creating a competitive environment for financial resources. Oth-
ers went so far as to express doubts about the difference made by the UNDP presence in Mali.

**Conclusion 4. Coordination and joint activities with UN and other development partners has improved but remains largely insufficient.** UNDP must work with the UN Country Team (UNCT) and MINUSMA to develop a more coordinated and coherent development programme in Mali, making better use of agencies’ respective expertise to better tackle the numerous challenges in Mali.

Examples of successful joint activities exist, and several partners acknowledged a recent increase of coordination efforts by UNDP. Some also appreciate UNDP’s ability to bring development partners together, and to advocate for the benefit of all agencies. The pooling of operational services with other agencies as well as with MINUSMA has had positive effects on efficiency and reduced operating costs.

The benefits of better coordination with UN system partners and MINUSMA are recognized by all, but the current efforts are not consistent with the ambitions of UNDAF+, which sought to build partnerships to ensure the coherence of the UN action, strengthen the complementarity of programs, and seek synergies.

UN partners have recognized the strengths of UNDP through its advocacy capacity with the Government, as well as its presence in the field, which could benefit all agencies. But in practice, there are almost no joint programmes, and little use of thematic expertise between UNCT agencies.

### 3.2 Recommendations and management response

**Recommendation 1.** UNDP must clearly define, both geographically and thematically, its area of intervention. An increased focus will help the country office in setting realistic goals, improve the monitoring of its activities, and better communicate on achieved results.

In order to address the problems resulting from the fragmentation of its programme, UNDP must select a more defined area of intervention. It can, for example, implement programmes in two, or a maximum of three, regions where strong and immediate needs are recognized – where the populations are most vulnerable to poverty, climate change and inter and intra-community conflicts. The choice of intervention areas must be based on an in-depth analysis of needs and challenges.

By focusing on a better-defined area of intervention, and in response to well-defined needs, the country office will be able to set realistic goals and measurable results, leading to improved monitoring, evaluation and reporting of results. It will also clarify its *development offer*, and will be able to demonstrate its added value, based on the results obtained. In addition, it will be in a position to demonstrate the validity of projects that can be replicated in other regions later, either by the UNDP itself in a future programme or directly by the Government.
The country office takes note of this recommendation and will take care to clearly define its intervention on the thematic level. On the other hand, geographically UNDP will put in place an implementation strategy in the targeted regions according to the context.

In the new CPD, the country office has planned to contribute to the implementation of the National Strategy for the Prevention of Violent Extremism and the Fight against Terrorism, the United Nations Integrated Strategy for the Sahel and the Sahel Strategy for Stabilization in the Liptako-Gourma and central regions.

Recommendation 2.

The next programme must be based on strategies that actively support exploring synergies and thematic integration, to address the complex development challenges of Mali more effectively.

UNDP needs to develop clearer strategies to support its work, including through the development of a theory of change for each programme area, and for the programme as whole. This strategy can highlight existing opportunities to move away from a silo approach and look for possible synergies between thematic areas. The implementation of the ongoing programme in Mali has shown, in a few cases, how results achieved in one area can have a positive impact on progress in another area. But this was not the result of an active search for thematic integration.

In the Malian context, it is recognized that the issues of poverty, climate change, social cohesion and security are inherently linked. By developing a programme where these issues are addressed in an integrated manner, UNDP can be more effective, have more impact, and thus deliver results to its government and financial partners.

UNDP needs to ensure that these integrated and geographically focused programmes systematically include cross-cutting issues of gender, youth, and partnerships with central and local institutions, as well as with civil society.

Management Response.

The country office recognizes the relevance of this recommendation. The next country programme was developed on the basis of the analysis of the programme approach and the integration of the theory of change at the levels of the three main results being finalized (i) “Inclusive governance and struggle against and violent extremism and inter-community conflicts, (ii) the development of the circular economy and promotion of the private sector, and (iii) environmental sustainability and resilience to the harmful effects of climate change and conflicts”. This approach will take cross-cutting themes into account, with linkages to gender, youth, and partnerships with central and local institutions, as well as with civil society.

Recommendation 3.

Strengthening the country office’s capacity for programme monitoring and evaluation will contribute to improved reporting, clear positioning as well as addressing implementation risks and insufficient results while projects are being implemented.

The UNDP programme must be articulated around realistic objectives and results that UNDP is able to achieve. The monitoring of results must be done through indicators that provide information on the real progress of the programme, based on data that UNDP is able to collect, either directly through the implementation of its projects, or in collaboration with its partners. Such efforts respond to more than just a procedural obligation, as a clear programme results framework can facilitate the monitoring, evaluation and reporting of results.

By choosing overly ambitious targets, out-of-scope results, and indicators that are detached from programme activities, UNDP complicates its communication work and reduces its credibility with its partners. A better-defined results framework can also enable UNDP to provide a more accurate picture of its positioning.

Strengthening programme monitoring and evaluation needs to be supported by increased monitoring and evaluation capacity, not only within the country office in Bamako, but also in the field. Improved monitoring efforts, particularly in the field, will allow UNDP to identify implementation risks and lack of progress in a timely and more efficient manner.

The office takes note of this recommendation and will take necessary actions to improve programme execution through strengthening of the monitoring and evaluation framework – including for its staff in Bamako and in the field – as well as the orientation of its communication towards Results-Based Management.

Recommendation 4.

UNDP should improve and clarify its position among the development partners of Mali. It has a recognized advantage as the main actor that can bring effective ways to deliver on the SDGs. In turn, the SDGs should also be a means for UNDP to better focus its programme.

Integrated and geographically focused programmes, accompanied by a clear results framework, will enable UNDP to better position itself among development actors in Mali. This positioning must clearly align with the SDGs and their implementation framework, to effectively support and monitor Mali’s development efforts.

UNDP partners – governmental, technical and financial – consider that UNDP has an advantage over other development agencies on the integration and monitoring of the SDGs in Mali. The SDG framework can be used more clearly as an entry point to the UNDP development programme and can guide UNDP’s engagement both with the Government and with local actors in the field.

UNDP must avoid engaging in the development of multiple national strategies, fragmenting its action and making its positioning more confusing. Refocusing on the SDGs has the potential to help UNDP gain efficiency and effectiveness.

Management Response.

The country office takes note of this recommendation and will play its new role as integrator to strengthen coordination, programming and planning to achieve the SDGs.

Recommendation 5.

**UNDP can use its central role, its good collaboration with government partners and the SDGs as entry points for a more coordinated UN development effort.**

One of UNDP’s strengths is its central position within the United Nations system, exemplified by its co-lead role on three of the four pillars of the UNDAF. Thanks in part to its good collaboration with government partners in many sectors, and its proximity to MINUSMA, UNDP is well-positioned to support efforts to design a more coordinated offer among UNCT agencies.

Finally, UNDP should use the SDG framework to map the activities of its UN partners to contribute to the establishment of a truly coordinated UNDAF. This will enable UNDP and its UN partners to make better use of available expertise and implement programmes that are truly based on their specializations, for increased impact and more sustainable results.

Management Response.

The country office takes note of this recommendation. Under the new United Nations Sustainable Development Cooperation Framework (UNSDCF), UNDP will strengthen its role as lead on the themes of peacebuilding, governance, environment and resilience. Some initiatives have already been initiated in conjunction with Excom agencies.

The results groups of the UNSDCF and the CREDD for which the UNDP is lead will proceed to the mapping of partner interventions with a view to improve coordination and search for synergies around the SDGs.

### Key Actions
