Cleared by: Amanda K Serumaga
Input into and update in ERC:

Position: Programme Manager
Position: Resident Representative
Position:

Unit/Bureau: Seychelles/RBA
Unit/Bureau: Mauritius/Seychelles
Unit/Bureau:

Overall comments: Overall the ICPE evaluation has made some pertinent observations, findings and recommendations, which will inform the formulation of the next country programme document. The Country Office has extracted findings and issues raised in the report and provided a management response as per below:

Evaluation Finding Issue 1:

UNDP's Seychelles program has no meaningful engagement with or influence over Seychelles policies, legislation or institutional capacities for poverty reduction

Management Response:

The Country Office's view is this is an overstated finding.

There are at least two instances in which UNDP support and engagement has been meaningful and influential at a structural level in terms of institutional development and data analysis linked to poverty reduction. First, UNDP has regularly engaged with the National Bureau of Statistics in the development of multi-dimensional poverty indicators; and supported previous studies to establish a national poverty line. Furthermore, UNDP in Seychelles contributed to the establishment of the Seychelles Conservation & Climate Adaptation Trust (See for the record <https://seyccat.org/about-us/#our-history>), providing catalytic resources necessary to set up what is now the pioneering mechanism for empowering the fisheries sector on governance, sustainability, value and market options and to trial and nurture business models to secure sustainable development in the blue economy <https://seyccat.org/about-us/#our-vision>

We agree with the evaluation findings which highlight the suboptimal financial and human resource capacity of the office to undertake extensive work at scale in the area of poverty reduction. In our view, this speaks to the overarching UNDP offer in U/MIC and NCC countries; and more so the SIDS offer noting the vulnerability context, which we now noted has undergone review by the UNDP Executive Board.

It is worth noting that office submitted proposals under TRAC II and the Innovation fund to secure finances to further develop the multi-dimensional poverty index and enhance the analysis of the Household budget surveys but was unsuccessful in both bids. It is expected that in 2019 UNDP will support the NBS in the development of a vulnerability scale to assess the dimensions in which people are susceptible and would need

welfare assistance. This will be in the form of scaling up the MPI pilot study and capacity building in formulation of evidenced-based policies, analysis of policies and their coherence across the various sectors dealing with welfare programmes using the TRAC 1 resources available.

Key Action(s)	Time Frame	Responsible Unit(s)	Tracking*	
			Status	Comments
1.1. Develop Annual Work Plan for support to NBS on the MPI	August- September 2019	UNDP	Completed.	AWP approved by UNDP in Q1 2019.
1.2 Participate in the high-level decision makers forum on MPPN and engage with national actors	July 2019	Family Affairs	Completed	
1.3 – Implementation of the MPI study at national level and drafting of policy recommendations and building capacity for evidenced based policy-making in collaboration with NBS and OPHI.	Oct-December 2019	UNDP/NBS	Pending approval of Engagement Facility to support the NBS in the upscaling of the MPI in Seychelles and capacity building in Policy formulation for poverty alleviation.	

Evaluation Finding Issue 2:

UNDP’s work in water resource management has a significant but as yet mostly unrealized potential, with impacts constrained by basic project management challenges. The impact and potential scalability of innovations trialled by UNDP has yet to be thoroughly assessed, although there are some positive signs that some of these have reasonable prospects for replication and sustainability.

Management Response:

The CO agrees with these findings and acknowledges that there is also a need to improve communications on development impact and results. In this context, and as part of the MTR recommendations, the EBA has prepared a Communications Strategy and retained a communications consultant to improve on communicating project results.

While the impact of the water resources management has yet to be quantified and reported on; we can update that the community of Val d’Endor has fully embraced the project and fully involved in the management of the watershed. Some of the project management challenges mentioned above and in the MTR of the Ecosystem Based Adaptation (EBA) Project have now been addressed. Training in project Management has been undertaken for all Project Managers of the PCU and conducted by staff of the UNDP Regional Service Centre. The newly approved COMESA project further builds into the synergies of the ongoing project to ensure that water resources are managed to minimize the impact of climate change on farming (example Drought/flooding/erosion etc.). Baseline data will be collected through the SGP funded Project with S4S and with SAA to ascertain project impact post project. In addition, the Project has also reviewed the key indicators and a set of shadow indicators have now been approved, which is better suited to the context of a SIDS like Seychelles.

The MCO would also note that there is need for UNDP to consider the “core” architecture of a CO or programme office, particularly as work evolves to upstream policy advisory and institutional development interventions in U/MIC contexts. Without a ‘strategic partnerships and communications’ function the capacity to engage and leverage proof of concept projects to bring them to scale or for replication is severely constrained. The office has now embarked on enhancement of the communications functions on a temporary basis to better position ourselves to share the development impact and carry forward a narrative on bringing projects to scale.

			Status	Comments
2.1. Implement the Communications Plan for EBA. And Initiate timeline for activities	September 2019- Dec 2020	PCU- EBA PIT	Communications plan finalized and part time Comms manager recruited to implement activities until Dec 2020	
2.2. UNDP Twitter feed activated Increase the frequency of Facebook and Twitter posts per week	July 2019	UNDP	The accounts are active. Posting needs to be done more frequently	
2.3. UNDP Communications Specialist on Detail Assignment to CO to improve website, training, and social media footprint	October 2019	UNDP	Comms Specialist already in Mauritius	
2.4 Revised log frame with new set of indicators prepared and approved by Adaptation Fund as part of the PPR 2019	June 2019	PCU/UNDP	Latest PPR for the EBA submitted in July to Adaptation Fund.	

Evaluation Finding Issue 3:

Despite some challenges, progress in the area of protected area management towards the outcomes, outputs and indicators set out in the CPD has been adequate. UNDP has provided valuable support toward the revitalisation of the Seychelles National Parks Authority (SNPA), contributing to a major reform to its mandate, which will potentially help it to increase its effectiveness as a conservation organisation rather than simply a revenue collection agency.

Management Response:

The CO agrees with these findings, and further notes that while UNDP can provide the necessary platforms to build capacity and improve on areas of efficiency, institutions and national stakeholders have an enormous responsibility in ensuring that the transfers of capacity and knowledge are utilized effectively.

We note that the Evaluation findings highlight weak management of the SNPA and notes that The CO has been a key partner for government to ensure successful implementation of GEF resources allocated in the management and sustainability of Protected Areas.

It is also worth noting that the current financial sustainability project builds on the successes of establishing and creating the legal context for both terrestrial and marine protected areas. The ongoing collaboration with The Nature Conservancy has also given impetus to the Marine Spatial Planning process and has helped Government secure the Debt for Adaptation Swap for pledging 30% of its EEZ for conservation.

Notwithstanding the delays in the approval of Nature Protection and Conservancy Act, some new categories of protected areas have not yet been gazetted and can only be proclaimed upon approval of the Act by the National Assembly.

Key Action(s)	Time Frame	Responsible Unit(s)	Tracking

3.1 Finalization of TNC Act	Dec 2019	MEECC, NA others	Currently under review by AGs office. Expected approval in Assembly by December 2019	
3.2 Improve Communications for PA results	July 2019	PCU, UNDP, SEYCCAT	Ongoing	

Evaluation Finding Issue 4:

Whether UNDP's work on protected area management succeeds in elevating the conservation status and improving the management of important marine and terrestrial biodiversity will ultimately depend on decisions outside the control of the projects

Management Response:

The CO takes note of this finding.

The Nature Conservancy Act has been pending approval since 2013. As of July 2019, the legislation was at White Paper Stage and the Attorney General's office was consolidating the comments received. It is expected to be presented to the National Assembly in Q3 of 2019. If passed, this would provide a legal basis for UNDPs ground work on marine and terrestrial biodiversity conservation and trigger the expansion of protected areas in Seychelles as new ones are proclaimed under the new categories in the Act. Notwithstanding, the UNDP interventions remain an important contribution to pathways for success.

			Status	Comments
4.1 No further Actions required at this stage (As above)				

Evaluation Finding Issue 5:

UNDP's contribution to improved resource efficiency has been modest and has fallen well short of targets. The scope for it to make a more substantial contribution may improve when a review of energy sector policies being conducted by the Seychelles Government is completed. This will help to clarify which energy efficiency strategies and incentives are likely to be most effective, something that is currently unclear.

Management Response:

The CO takes note of this finding. As with Issue number 4, success in this area will ultimately depend on decisions outside the control of the UNDP projects including political will and the policy, legal and regulatory environment.

It should be noted that at the time of project development, one of the priorities for Government of Seychelles was to improve energy efficiency and ensure supporting the policy legislative enabling environment for resource efficient technologies to thrive. While the Photovoltaic (PV) project, which ended shortly before the current CPD cycle saw an impressive uptake of PV in the Seychelles; the current project has been hindered by inadequate government impetus in updating the necessary legislation. Nonetheless, awareness raising on energy efficient appliances with all stakeholders from importers to customs to households has had a tremendous impact in the uptake of energy efficient appliances through, for example the LED exchange scheme.

An additional impediment to progress has been the unavailability of relevant feasibility studies and necessary information from the Public Utilities Corporation, which would have enabled the development of a project to the Green Climate Fund to upscale Renewable Energy in Seychelles and ensure that the intended national contributions were met by 2030.

Key Action(s)	Time Frame	Responsible Unit(s)	Tracking Status	Comments
5.1 Finalization of the terminal evaluation of the Renewable Energy project and undertake necessary follow up actions on key recommendations.	August 2019	UNDP/PCU/MEECC /Energy Commission	Terminal Evaluation of Resource Efficiency Project Completed and Management response to be finalized	
5.2 Finalization drafting of EE legislations and strategies	December 2019	SEC, MEECC	Currently ongoing	

Evaluation Finding Issue 6:

UNDP's environment portfolio in Seychelles provides a highly valued source of external support for partners and focusses on important and challenging issues. Notwithstanding this, the performance of the Seychelles environment portfolio overall has been uneven, and the lack of resources has limited UNDP's engagement and support for policy development outside of the work conducted within projects.

Management Response:

The Country Office agrees with this finding; and would welcome a discussion on the overarching UNDP offer regarding U/MICs and SIDs in the context of the vulnerability index; and continued relevance of UNDP in these contexts.

First, the allocation of \$50,000 USD per annum TRAC funding which provides for both management and oversight costs and support requests from Government of Seychelles presents a binding constraint of how to scale up engagement with analytical work and upstream policy support. While the CO is aware that Seychelles as an NCC cannot access more TRAC funds; it is a matter of concern that applications for TRAC II and other Innovation funds are also not successful. The net result is a focus on singular project work which are supported by restrictive vertical funds.

Second, the Evaluation makes note that UNDP was not directly involved in the Blue Bonds process which was rolled out with the support of the Commonwealth and World Bank. As indicated in Finding 1; the UNDP was instrumental in supporting the institutional framework on the complementary mechanism resulting in the establishment of SeyCCAT, which provides the seed funding for “proof of concept” projects that may “graduate” to access Blue Bond loans. Furthermore, UNDP has engaged in discussions with the Debt for Nature Swap with all stakeholders during the preparation of Protected Area projects.

Third, the design process and architecture of GEF – UNDP projects also tends to forestall opportunities for complementarity and leveraging the portfolio to retain policy and strategy development functions; and consistent oversight and management support. Going forward, the CO would like to see more convergence around the CPD pillars to inform the financial and human resources required to better position UNDP in Seychelles.

Key Action(s)	Time Frame	Responsible Unit(s)	Tracking	
			Status	Comments
6.1 Initiate discussions for UNDP’s next CPD cycle	November 2019	UNDP, GoS	The Country office is considering the timing and alignment of the next CPD cycle with Mauritius and considering the current political and economic context	

Evaluation Finding Issue 7:

Given the context and the limitations of the existing GEF funding mechanisms, the Programme Coordination Unit (PCU) established by UNDP within the Ministry of Environment and Energy, is a sensible arrangement for absorbing the project management costs of the support UNDP provides through multiple projects to the Ministry of Environment, Energy and Climate Change (MEECC).

Management Response:

The CO agrees in principle with this finding.

The Programme Coordination Unit has been cited as best practice several independent mid-term and terminal evaluations and showcased in Africa for cost efficiencies, capacity building and of course adaptive management.

The CO does note, however, that in the absence of a sufficiently resourced UNDP office; there is risk that the work of the PCU is not sufficiently attributed to UNDP support; resulting in low visibility due to the limited capacity to demonstrate development impact at portfolio level; and, therefore, reduced opportunities for selection as a partner of choice. For example, notwithstanding the already cited engagements; the PCU sustainability depends of resource mobilisation linked to UNDP; in the absence of a robust analytical reports, social media and/or policy engagement footprint. Thus, the PCU, while saving on project management costs; cannot contribute to the need for policy and strategy engagement cited in this evaluation report, as it operates on a project delivery basis – with sub-optimal portfolio approaches.

Key Action(s)	Time Frame	Responsible Unit(s)	Tracking Status	Comments
7.1 Ensure a continuous portfolio of project to ensure sustainability of the PCU	Continuous	MEECC/PCU	Govt to endorse projects through UNDP and implemented through PCU	Need for discussion on the engagement of the PCU on programme development

Evaluation Finding Issue 8:

Implementation has been made more challenging by unnecessarily complex project designs and insufficient attention to the feasibility of some major components of projects

Management Response:

The CO agrees in principle with this finding.

Amongst the key issues are the process of design, consultation and local capacity, which have contributed to sub-optimal projects. The CO would strongly suggest that a wider conversation is required regarding the technical backstopping efficacy available for Country Offices in the absence of substantive capacity resourced at CO level.

Some key examples include:

- Lack of availability of technical capacity: The indicators under the Adaptation Fund do not adhere to an RBM approach right from design stage; while projects are required to fit the criteria laid out by the donors. A review by the M & E functions of UNDP would have been helpful in this regard to engage with GEF UNDP team to ensure alignment. The absence of this capacity throughout the MCO at inception stage, resulted in calls for revisions at mid-term.
- Sub-optimal Project Development timelines: The lengthy timelines between development and implementation result in uneven engagement by key interlocutors; and, the risk of inconsistent amendments where key changes occur in the counterpart ministries –

leading to poor design. For example, the Adaptation Fund the project was developed in 2012, and funds made available only in 2014. Similarly, the GEF6 cycle PIF was readied in 2015, while funds for full Project Preparation were only made available in 2018 and the project document to be approved in late 2019.

- **Insufficient consultation:** Under the GCCA+ project all cost estimates were done by the Ministry of Environment Energy and Climate Change. As a result, the cost-estimates for implementation in La Digue were artificially low having underestimated the cost of transportation of goods by sea. UNDP was engaged by the EU after negotiations with Government of Seychelles to implement the project, there was limited to no consultation of local stakeholders at design stage by either the Ministry or by the donor. In this instance, the risk management process and technical backstopping by UNDP could have complemented the CO to together engage in much needed engagement with both government and the donor on process
- The clear feedback from national stakeholders is that this finding is of serious concern and should be raised at Community of Practice events or channeled through partnerships to bring to the attention of donor parties through Country led interventions highlighting complexities of SIDS

Key Action(s)	Time Frame	Responsible Unit(s)	Tracking Status	Comments
8.1 For discussion in next CPD cycle/PIF formulation or PPG phase	June 2020	UNDP, PCU		
8.2 Govt agencies need to pay attention to project design and log frames	Ongoing	UNDP/MEECC		Would add that UNDP will also need to consider the capacity deployed during these processes

Evaluation Finding Issue 9:

For a small sub-office like UNDP’s office in Seychelles, ability to access technical backstopping and support from relevant UNDP experts is critical for ensuring high-quality designs, and implementation.

Management Response:

The country office agrees in principle with this finding.

The Country Office would, however, note that this oft cited issue requires a structural reform rather than encouragement for more concerted action within the same framework.

The CO would agree, as cited in an earlier finding, that project implementation is uneven; which can, in part, be attributed to uneven technical backstopping. The CO notes there has been more success in the biodiversity and International waters projects; where RTA engagement has been regular although with attendant process and design challenges. The CO also acknowledges the high turnover of RTAs from the RSC and challenging distribution of portfolios that may hamper engagement.

It is for these reasons, that the CO would argue there is need to relook at the core staffing model in the context of SIDs U/MIC countries. The optimal technical support should be in country. With the considerable and growing environment portfolio in the MCO; the attendant risks of non-delivery on our vertical fund access, which serves as the basis for our sustainability; investment in a substantive technical backstop dedicated to the MCO – from pooled resources across the programme – should be a priority in design. The current reliance on occasional missions, detail assignments and ICs as a robust strategic and programmatic response contribute to the inconsistencies cited in the report; and speaks to an absence of a long terms strategic view in terms of UNDPs positioning.

Key Action(s)	Time Frame	Responsible Unit(s)	Tracking Status	Comments
9.1. Technical support from RTAs and communications on-going.			Ongoing	Consider investment in in country support across the portfolio

Evaluation Finding Issue 10:

Given the environmental focus of the current program, the scope promote gender equality in a significant and consistent way is constrained. Reflecting this, in the current programme cycle, 75% of expenditure was reported as making a limited contribution to gender equality (GEN1). The remaining 25% being expenditure without a noticeable contribution to gender equality (GEN0).

Management Response:

The country office agrees with this finding.

Until 2017, GEF did not have a gender reporting requirement. Given that all projects currently being implemented were approved and signed prior to 2017, the scope to report on Gender in environmental projects is limited. However, having taken on board the various recommendations of recent independent mid-term evaluations, a gender assessment of all projects is being conducted and a training for Gender reporting is being conducted by UNDP through the technical and financial support of the Global ABS project. With the new GEF policy all projects preparation must now undertake a Gender analysis and submit a gender Action Plan as part of the project approval process.

Key Action(s)	Time Frame	Responsible Unit(s)	Tracking Status	Comments

10.1 Gender Report and Training schedules for all GEF projects	July 2019	UNDP, PCU, GEF	The PCU has recruited a consultant to finalize a gender report and UNDP ABS Global project is supporting a Gender training in the second week of July	
10.2 Improve reporting on Gender Responsiveness and Gender transformation in subsequent years	July 2020			
Evaluation Finding Issue 11: The Seychelles Country Program Document does not serve as an effective vehicle for promoting accountability to the UNDP Executive Board for results alignment and resources assigned to the programme.				
Management Response: <u>The country office agrees in principle with this finding.</u>				
<p>Given the lengthy and consultative/vetting process that results in an approved country programme document; the country office would query where this observation is best directed in country. While it may be clear that the two sovereign governments require to separate country programme documents; whilst UNDP operates a multi-country office; the constituent parts of a CPD which include specific RM commitments; core financing; an M & E framework etc.; do not take into account the reality that the investment in the sub-office is amounts to little more than a project office. Thus, while the CPD design and political process presents the imperative to be ambitious; the reality of the UNDP SIDS offer in U/MIC countries is much more limited; thereby resulting in significant misalignment.</p> <p>Following this independent country programme evaluation, and in view of the now approved SIDS offer by UNDP – there will be a need to better articulate what can and should constitute the CPD; and the feasible mechanisms to promote accountability and effective reporting.</p>				
Key Action(s)	Time Frame	Responsible Unit(s)	Tracking Status	Comments
11.1 Improve CPD design and reporting	June 2020	UNDP		
Evaluation Finding Issue 12: There are also significant weaknesses in results-based management at the project level.				
Management Response: <u>The country office agrees with this finding.</u>				

As stated in Management response to Finding #8; UNDP has tended to have limited influence at design stage as projects need to fit in line with donor requirements and templates; resulting in less than optimal design of the M & E frameworks. Nonetheless, greater effort has been made in 2019 to strengthen monitoring and evaluation; documentation; and communication of results and lessons learned. The UNDP Regional Service Centre technical team provided in-depth training on project management requirements and reporting and M&E to project colleagues in April 2019.

Evaluation Conclusions Issue 13:
Over the past decade, Seychelles has registered sustained improvements in per capita income and achieved a relatively high level of human development, trends that have limited the scope of UNDP’s support

Management Response:
The CO agrees with this conclusion.

Seychelles’ high-income status, which obviates access to ODA presents a significant challenge to continuing development practice. The opportunities to work in financing for development through government cost sharing and the private sector will be key to supporting UNDP’s transition alongside Seychelles. The capacity to seize these opportunities will require serious consideration in terms of the human and financial resources made available at a country, sub-regional and global level.

Furthermore, countries such as Seychelles, which have limited capacity in terms of manpower and technical assistance, may face challenges in sustaining growth despite being fully cognizant of the development challenges that lie ahead. The narrative on the vulnerabilities of small island states – including climate, resilience to shock, and the demographics specific to Seychelles and Mauritius - warrant a revisiting of the formulaic way decisions on ODA – and UNDP core resources are decided. In the context of the sustainability of the Development Goals 2030, the HDI (and GDP) measures may need to be informed by other metrics to decide on development support.

Key Action(s)	Time Frame	Responsible Unit(s)	Tracking Status	Comments

13.1 Support the development of a seminal paper on Seychelles Vulnerabilities which can be used to explain the need for additional support from the donor community.	Jan 2020	UNDP, Foreign Affairs, Economic Planning		
13.2 Support the preparation of the VNR highlighting the inherent vulnerabilities of the country	2021	Government/UNDP		
<p>Evaluation Conclusions Issue 14: Government partners consulted by the evaluation highlighted the value of the role UNDP has played in smoothing and facilitating access to funding available through global environmental and climate change organisations. The resources UNDP has mobilised through these mechanisms have been important instruments for extending the reach of the Governments own programs, trialling new approaches, and developing the evidence base required to underpin reforms.</p>				
<p>Management Response 14. <u>The country office agrees with this conclusion.</u></p> <p>Government values UNDP support on various issues. However, despite the capacity building in country- institutional capacities remain weak due to high turnover of staff. Emphasis would need to be placed on documentation; evidence-based results and digital archiving to strengthen institutional memory and ensure continuity and progress of results.</p>

14.1 No actions required				
<p>Evaluation Conclusions Issue 15: UNDP’s contribution to targeted outcomes has been undermined by implementation challenges which have affected four of the five major projects considered by this evaluation</p>				
<p>Management Response: <u>The CO agrees with this conclusion</u></p> <p>One of the key challenges of project success has been the reporting, communication of results and impact. That has been one neglected area which is now being improved. As reported above for the EBA project, communications strategy has been prepared, additional staff hired. For UNDP, detailed assignment fielded to support the CO in communicating these results. UNDP has now agreed with Government to ensure that indicators of success are limited to what is within UNDP’s scope of influence especially with regards to enacting new legislation.</p>				

Evaluation Conclusions Issue 17:

The uneven performance of the program reflects four main factors, including the small island states context, problems with project design, inconsistencies in technical support, and quality of monitoring, evaluation and communications.

- i. The challenges of working effectively in a Small Island State- In particular, the small size of Seychelles bureaucracy means the capacity of key institutions and decision makers is often stretched. Decision makers often have broad mandates and heavy travel schedules, which can slow things down.
- ii. it reflects challenges in establishing designs that provide solid frameworks for implementation
- iii. inconsistencies in the quality of technical backstopping and support from UNDP's regional technical advisors in Addis Ababa
- iv. monitoring and evaluation, documentation of lessons learned, and communications is weak and needs improvement the Country Office needs to strengthen its use of results-based management practices

Management Response:

The CO agrees with these findings, which are elaborated elsewhere

Evaluation Conclusions Issue 18:

Given Seychelles high-income status, but small size and vulnerability as an island nation to climate change, UNDP can play a significant role in contributing knowledge and advisory services in areas where it has a direct role and global expertise

Management Response:

The CO agrees in principle with this conclusion.

As noted in the management responses for findings 1,2,7-9, 11 and 13; while there are opportunities to engage in knowledge and advisory services in Seychelles, the binding constraint remains the available human and financial resources to make the necessary, if initial, investment. The current preoccupation with delivery of downstream projects; and within the context of hard output activities – has constrained the UNDP presence from engaging in upstream policy work. Possible solutions lie, in part, with the reformulation of the CPD in line with the ICPE recommendations to seek a balance between both programming orientations; and for a catalytic investment by UNDP to establish a refreshed SIDs paradigm and our positioning within this context.

Evaluation Recommendations Issue 19:

In developing the new Country Programme Document care should be taken to reflect Seychelles' particular needs and issues as a small island state that has attained high-income status, and UNDP's capacity to provide support. UNDP should focus its limited resources on strengthening the focus of the program on environmental management and climate change, and synergies between its different components.

Management Response:

The CO partially agrees with this recommendation.

While the CO agrees with the focus on environmental management and climate change; the analytics from the IFIs on U/MIC and HIC countries suggest a need to engage with the question of inequality, in line with SDGs 2030 leave no one behind principle. Non-inclusive growth would be a key risk for Seychelles, and similarly situated countries. The specific demographics of the Seychelles with an ageing population; high dependency on migrant labour; and constraint tax base suggest that support to National Bureau of Statistics on Department of Blue Economy, for example, and other key policy institutions on inclusive growth would be in alignment with the UNDP mandate; and given our small programme provide the focused knowledge and advisory support noted in other segments of this report.

Evaluation Recommendations Issue 20:

The country office should ensure future project designs avoid unnecessary proliferation of project components and counterparts and include only well-reasoned straightforward M&E frameworks and targets. Where designs include plans for complex physical works that have not been subject to detailed feasibility studies, sufficient time should be allocated to complete this work, and flexibility should be provided to accommodate and respond appropriately to the outcomes of this work.

Management Response:

The CO agrees with this finding

Reference is made to previous Findings 8, 11 and 12– where the details of the recommendation are addressed.

Evaluation Recommendations Issue 21:

The country office should improve results-based management by ensuring program level reporting frameworks include objectives, and targets and related indicators only if there is a realistic prospect for UNDP to have a measurable influence over them; building increased M&E and research capacity into individual project designs, or by establishing a shared resource that can provide analytical support across the PCU; developing a shared narrative across the program about the challenges it is helping Seychelles government to address.

* The implementation status is tracked in the ERC.
